The biggest appeal of D-STAR is long distance communication over the Internet gateway through repeaters. Even with a handheld radio, you can communicate with a friend in another city or country with clear audio. You can access to your local repeater and route to a different repeater, even from the opposite side of the earth.

What is D-STAR?

The term D-STAR is Digital Smart Technology for Amateur Radio. It is an open protocol for digital communications established by JARL (Japan Amateur Radio League).

Digital Modulation For Clear Audio

As the digital voice incorporates GMSK modulation with AMBE™’s Forward Error Correction, the result is clear intelligible audio with digital clarity using only 6 kHz occupied bandwidth*. It provides clearer audio than analog FM mode without typically increasing white noise level at the fringes of the communication range.

* Emission designator: 6K00F7W.

Routing and Linking

One of the great features of D-STAR is the user’s ability to talk anywhere they want via call sign commands. With the basic call sign routing, you can route your communications to a specific user or repeater. You are not required to know where repeater the person you want to communicate with is located. For those repeaters running dplus software, you have the capability of linking to another repeater or a group of repeaters through a reflector. Reflectors are a great way to meet new people and have communications with a group of users from all over the world at the same time.

Long Distance Communications

At Your Finger Tips

The Terminal mode and Access Point mode enable you to make D-STAR calls through the Internet, even from areas where no D-STAR repeater is accessible by RF signal.

Terminal Mode and Access Point Mode

The Terminal mode and Access Point mode enable you to make D-STAR calls through the Internet, even from areas where no D-STAR repeater is accessible by RF signal.

Terminal Mode

Connect a D-STAR radio (either ID-31E PLUS, ID-51E PLUS2 or ID-4100E) to the Internet through a PC or Android™ device, and send your voice and/or data through the Internet gateway to a destination repeater.

Access Point Mode

Use an ID-31E PLUS, ID-51E PLUS2 or ID-4100E radios connected to the Internet through a PC or Android™ device, as an Access point. You can use another D-STAR radio to send your voice and/or data through the Access point radio, and communicate with D-STAR stations all over the world.

DD Mode Operation

DD mode is a 128 kbps data mode in a 10 W mobile package on the 23 cm band. It is possible to connect to the Internet via gateway. You can browse the homepage by connecting a personal computer.

* A new DD mode compatible model will be available in the near future.

Note for the Terminal mode and Access Point mode:

- You need an Internet connection with an IPv4 Global IP address. If you use a cellular system, you need an IPv4 Global IP address assigned to your Windows® or Android™ device.
- Before operating in the Terminal mode of the Access Point mode, BE SURE to check your local regulation or laws.
- When operating in the Access Point mode, you need two call signs. One for the Access Point transceiver and one for the Remote D-STAR transceiver.
- For Access point or Terminal mode operation, you need two call signs. One for the Access Point repeater/server that has the RS-3P3C installed.
- When using the terminal mode or access point mode through a PC, an optional free download software, RS-MS3W, is required to be installed in the PC.
- When using the terminal mode or access point mode through an Android™ device, an optional free download application, RS-MD3A, is required to be installed in the Android™ device.

See the location of other stations or repeater sites on a map using received position data. The radio’s “FROM” and “TO” can be automatically set by tapping a repeater site or a D-PRS station on the map. When used with a locally cached map, your own and other station’s locations can be shown without needing an Internet connection (Offline map function*).

* For only the RS-MS1A.

Pictures on your iOS™ or Android™ device can be shared over D-STAR network. Pictures of your shack, operating place in the field, rigs, or friends can be sent to other D-STAR radio that are also using the application. Add images and make QSOs even more enjoyable. Pictures can be sent in the DV Fast Data mode or conventional DV mode (with voice).

**Share Pictures**

You can set the radio's “FROM” and “TO” fields and change some of the radio’s function settings from your iOS™/Android™ device. When using with the optional VS-3 Bluetooth® headset, you can wirelessly talk through the ID-4100E or ID-5100E from a short distance* away from your rig.

* Communication range of Bluetooth® is approximately 10 meters (33 feet).

DR Functions and Remote Settings

You can set the radio’s “FROM” and “TO” fields and change some of the radio’s function settings from your iOS™/Android™ device. When using with the optional VS-3 Bluetooth® headset, you can wirelessly talk through the ID-4100E or ID-5100E from a short distance* away from your rig.

* Communication range of Bluetooth® is approximately 10 meters (33 feet).

**DR Functions and Remote Settings**

The application enables you to add and edit destination call signs and names used in the DR function.

**Repeater List Viewer**

The repeater list viewer shows repeater information including frequencies, call signs and frequency offsets in the repeater list. You can use it to manually set your radio when you are in a different area from your usual operating environment.

**Receive History**

The repeater list viewer shows repeater information including frequencies, call signs and frequency offsets in the repeater list. You can use it to manually set your radio when you are in a different area from your usual operating environment.

**Receive History**

The receiver history enables to read and edit the receiver station’s information. Additional information from an Internet database, such as QRZ.com or APRS.fi, can be downloaded.

**Text Messaging**

Text messaging enables you to chat with other D-STAR users that are using the application. Use the function when texting is better than exchanging information over voice. By using iOS™/Android™ devices, you can exchange messages in your preferred language.

**Text Messaging**

Text messaging enables you to chat with other D-STAR users that are using the application. Use the function when texting is better than exchanging information over voice. By using iOS™/Android™ devices, you can exchange messages in your preferred language.

**D-STAR Stations and Repeater Sites Mapping**

See the location of other stations or repeater sites on a map using received position data. The radio’s “FROM” and “TO” can be automatically set by tapping a repeater site or a D-PRS station on the map. When used with a locally cached map, your own and other station’s locations can be shown without needing an Internet connection (Offline map function*).

* For only the RS-MS1A.

**Call Sign List**

The application enables you to add and edit destination call signs and names used in the DR function.

**Import and Export**

A user-programmable repeater list or a repeater list on the Internet can be imported from a PC to the application. In addition, receive history can be exported from the application to a PC.

* iTunes is required for the RS-MS1I.

**Other Functions**

- **Transceiver Setting** Sets certain transceiver’s settings.
- **Application Setting** Sets the RS-MS1A/I settings.

**Transceivers and Compatible Application**

* Download free from Google Play™, (OS: Android™ 4.0 or later)

* Download free from App Store. (OS: iOS™ 8.0.1 or later)  

* You can not change transceiver setting. The RS-MS1I/RS-MS1A may not work, depending on the OS version, installed applications, and so on.
GPS Location Reporting Functions

Displays Your Own and Received Location Data
The ID-51E PLUS2, ID-31E PLUS, ID-5100E or ID-4100E have an integrated GPS receiver and show your own location, course, speed and altitude on the display. The GPS location data can be transmitted with voice. Received location information is also shown with distance and direction from your location.

The IC-7100 and IC-9100 enable you to manually input the current position or connect an external GPS receiver.

Export to the Android™ or iOS™ Application
When connected with an Android™ or iOS™ device*, received location data can be plotted on a Map Application.

* ID-51E PLUS2, ID-31E PLUS, ID-5100E and ID-4100E with RS-MS1A for Android™ device.
ID-4100E with RS-MS1I for iOS™ device.

Repeater Search Function
The repeater search function* assists you in accessing nearby repeaters, even in areas you are visiting for the first time. The function searches for a nearby repeater using the repeater memories with the GPS location data.

* ID-51E PLUS2, ID-31E PLUS, ID-5100E, ID-4100E and IC-7100 functions. To use the near repeater search function, the position data of the repeater is required. The radios will be shipped with the D-STAR repeater memories preprogrammed, but the position data of some D-STAR repeaters may not be entered or exact.

Automatic Location Reply Function*
When receiving a call addressed to your call sign, this function automatically replies your current location data. Replied location data will pop up on the caller’s display.

* ID-31E PLUS, ID-51E PLUS2, ID-4100E and ID-5100E

GPS Log Function*
The GPS log function logs your location data at regular intervals (1 second–60 seconds, depending on setting) and memorizes this in the SD card or microSD card to export to your PC. You can import the data into Google Earth or other map applications.

*SD card microSD card required. *ID-31E PLUS, ID-51E PLUS2, ID-4100E and ID-5100E

D-PRS (Digital Packet Reporting System)
D-PRS converts the D-STAR GPS information to APRS™ compatible strings and presents it to the APRS-IS (APRS Internet Server) and other APRS™ clients. The APRS™ maps show real-time APRS™ information and tracks D-STAR stations on the Internet.
**Upgraded Entry Model with New Functions**

- 430 MHz single band
- 3 colour variations (Silver/Red/Gold)
- DV enhanced functions with an Android™ device*1
