Please read this installation guide before installing the USB driver.

- This installation guide describes how to install the Icom product's USB driver included in its CD. If you download the USB driver from the Icom Download Service, specify the folder which the driver is stored in.

### 1. OVERVIEW

#### System requirements

To use the software, the following hardware and software are required:

**PC**
- Microsoft® Windows® 7 (32/64bit), Microsoft® Windows Vista® (32/64bit) or Microsoft® Windows® XP (32 bit) OS
- A USB 1.1 or 2.0 port

**Cable**
- A USB cable (A-B type)

**NOTE:**
- Icom is not responsible for problems using a PC with the above OS installed.
- The USB driver cannot be used with 64 bit version of Microsoft® Windows® XP.
- In this installation guide, the above OSs are described as “Windows 7,” “Windows Vista” and “Windows XP.”
- The description on this guide is based on Windows 7.

**Before installation:**
- When installing the software, log on as the administrator.
- Make sure no other applications are running.

**NOTE:**
- Depending on the length of the USB cable, the transceiver may not be recognized by the PC if you use a 3rd party USB cable. Use as short a cable as possible.
2. PRECAUTIONS

Before connecting to the PC
The USB driver is not supported by the automatic recognition system, so NEVER connect the USB cable between the transceiver and the PC until AFTER the USB driver has been installed. See the “Driver installation” on page 3 for details.
• Once the driver is installed, the remote control operation is available with just connecting the USB.

Important
• Depending on the PC performance (OS, environment, etc.), the USB audio may be interrupted, or a control by the PC software may get delayed.
• If the CPU has a heavy load, the USB audio is easily interrupted.
• The settings of the installed audio player may be changed after connecting the transceiver to the PC.
• Icom is not responsible for improper operation when connecting the transceiver and the PC through a USB hub.

After installation
• Uninstalling the USB driver
You cannot uninstall the USB driver of each unit. After uninstalling the USB driver, all transceiver which requires this driver installation cannot be operated with the PC.
• When another transceiver is connected
The COM port number is automatically added after turning ON the transceiver’s power.

About compatible products
The products which require this driver installation are as shown on the Icom website (http://www.icom.co.jp/world/index.html).
3. DRIVER INSTALLATION

This description is based on Windows 7.

**NOTE:**
- NEVER connect the USB cable between the transceiver and the PC until AFTER the USB driver has been installed.
- This USB driver is not supported by the automatic recognition system.

The displayed dialogue boxes, indications or operations may differ slightly from the following instructions, depending on your system version and settings.

① Make sure that the transceiver and PC are not connected.
② Start Windows.
   - Quit all other applications if any are running.
③ Double-click the “CP210xVCPInstaller.exe” which is stored in the “Driver” folder to open the USB driver installer.
④ When “User Account Control” dialogue box appears, click [Yes].
⑤ Verify the installation location, then click [Install].
⑥ Windows starts scanning for the system, then starts installing the driver.
⑦ After the installation has completed, click [OK].
   - Restarting the PC is recommended.
⑧ After restarting the PC, connect the USB cable between the transceiver and the PC, as shown below.
   - Be sure to check the USB cable connector shape between Type A and Type B.
⑨ Turn ON the transceiver’s power.
   - “Installing device driver software” appears.
   - The USB audio driver is also automatically installed.
⑩ This dialogue appears when the driver installation has been completed.

Depending on your system version and settings, you may be prompted to restart the PC. In this case, follow the instructions on screen.
4. COM PORT CONFIRMATION

After the driver installation has been completed, confirm the port connection and port number. This description is based on Windows 7.

1. Click the Windows “START” icon.
2. Right-click “Computer” in the <Start> menu, and then click “Properties.”
3. Click [Device Manager]. “Device Manager” appears.
4. Click “>” to the left of “Ports (COM&LPT),” then confirm “Silicon Labs CP210x USB to UART Bridge (COM*)” is displayed.
   • If “!” or “×” is displayed on the “Device Manager” screen, the driver may not be properly installed. In such a case, first uninstall the USB driver, then reinstall it.
   The COM port number is displayed instead of “*”. If the transceiver has two COM ports, two COM port numbers are displayed.

Check the COM port number.
In this example, the USB serial COM port number is “3.”
5. FOR YOUR REFERENCE

When connected together, you can remotely control the transceiver with a PC using CI-V commands. The transceiver has a conversion function between USB and Serial. So, if the transceiver is connected to a PC with the USB cable, the CT-17 is not required for the Icom Communications Interface-V (CI-V) operation. The [USB] port and [REMOTE] jack can be simultaneously used. So CI-V operation is available from a PC, even if the Icom CI-V products, such as transceivers, receivers or linear amplifier (IC-PW1), is connected to the [REMOTE] jack of your transceiver.

COM Port setting

To change the COM Port number setting, connect the transceiver to the PC and then turn the transceiver power ON after the driver installation has been completed. This description is based on Windows 7.

1. Click the Windows “START” icon.
2. Right-click [Computer] in the <Start> menu, and then click [Properties].
3. Click [Device Manager].
   • "Device Manager" appears.
4. Right-click “Silicon Labs CP210x USB to UART Bridge (COM*)” and then click “Properties.”
   The COM port number is displayed instead of "*". If the transceiver has two COM ports, two COM port numbers are displayed.
5. Click the [Port Settings] tab, then click [Advanced...].
6. Set the desired COM port number, then click [OK].
7. Click [OK] to close the screen.

When connected together, you can remotely control the transceiver with a PC using CI-V commands.
5. FOR YOUR REFERENCE

Uninstalling the driver

The displayed dialogue boxes or indications may differ slightly from the following instructions, depending on your system version and settings. This description is based on Windows 7.

1. Start Windows.
2. Select the “Control Panel” in the Start menu.
   • The control panel appears.
3. Click the “Uninstall a program.”
   • The “Uninstall or Change a Program” menu appears.

4. Double-click “Silicon Laboratories CP210x USB to UART Bridge (DriverRemoval).”
   When “User Account Control” dialogue box appears, click [Continue].

5. The “Confirm Uninstall” appears.
   Click [Uninstall] to uninstall the driver.
   • The uninstallation starts.

6. After the uninstall has completed, click [OK].
   • Restarting the PC is recommended.

Audio considerations

[Installed audio player] (Windows standard software, etc.)
For modulation input from the PC, the transceiver's USB port must be selected as the modulation input source connector.

You can set the modulation input source connector in the Set mode, or using the CI-V system.
See the appropriate page in the transceiver's instruction manual for details.

Please read the instruction manual that comes with the software for details, if you monitor the PC's received audio from an external PC speaker, or use the audio from an external PC microphone as the modulating input.
