This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
FOREWORD

Thank you for purchasing this Icom product. The IC-R5 COMMUNICATIONS RECEIVER is designed and built with Icom’s superior technology and craftsmanship. With proper care, this product should provide you with years of trouble-free operation.

We want to take a couple of moments of your time to thank you for making your IC-R5 your radio of choice, and hope you agree with Icom’s philosophy of “technology first.” Many hours of research and development went into the design of your IC-R5.

 FEATURES

❍ Covers 0.150–1309.995 MHz* wide frequency range
  *Some frequency bands are inhibited according to version

❍ External power supply operation

❍ 1250 memory channels* with 18 banks available
  *200 auto write and 50 scan edge channels are included.

❍ Built-in bar-antenna

❍ New DMS (Dynamic Memory Scan) System

IMPORTANT

READ ALL INSTRUCTIONS carefully and completely before using the receiver.

SAVE THIS INSTRUCTION MANUAL—This instruction manual contains important operating instructions for the IC-R5.

EXPLICIT DEFINITIONS

Versions of the IC-R5 which display the “CE” symbol on the serial number seal, comply with the essential requirements of the European Radio and Telecommunication Terminal Directive 1999/5/EC, and that any applicable Essential Test Suite measurements have been performed.

Icom, Icom Inc. and the ICOM logo are registered trademarks of Icom Incorporated (Japan) in the United States, the United Kingdom, Germany, France, Spain, Russia and/or other countries.
PRECAUTION

⚠️ WARNING! NEVER operate the receiver with a earphone, headphones or other audio accessories at high volume levels. Hearing experts advise against continuous high volume operation. If you experience a ringing in your ears, reduce the volume level or discontinue use.

⚠️ WARNING! NEVER connect the receiver to an AC outlet. This may pose a fire hazard or result in an electric shock.

⚠️ WARNING! NEVER operate the receiver while driving a vehicle. Safe driving requires your full attention—anything less may result in an accident.

⚠️ WARNING! NEVER throw a battery cell into a fire since as internal battery gas can cause explosion.

⚠️ WARNING! NEVER disassemble the battery cell. If the battery cell’s internal material (electrolyte liquid) gets into your eyes, wash your eyes with water and obtain treatment from an eye doctor immediately.

NEVER connect the receiver to a power source of more than 6 V DC directly. This will damage the receiver.

NEVER connect the receiver to a power source using reverse polarity. This will damage the receiver.

NEVER expose the receiver to rain, snow or any liquids. The receiver may be damaged.

NEVER operate or touch the receiver with wet hands. This may result in an electric shock or damage the receiver.

NEVER solder the battery cell. This may damage the battery.

AVOID using or placing the receiver in direct sunlight or in areas with temperatures below −10°C (+14˚F) or above +60°C (+140˚F).

AVOID the use of chemical agents such as benzine or alcohol when cleaning, as they can damage the receiver’s surfaces.

Even when the receiver power is OFF, a slight current still flows in the circuits. Remove batteries from the receiver when not using it for a long time. Otherwise, the installed batteries will become exhausted, and will need to be recharged.

For U.S.A. only

CAUTION: Changes or modifications to this device, not expressly approved by Icom Inc., could void your authority to operate this device under FCC regulations.

OPERATING THEORY

Electromagnetic radiation which has frequencies of 20,000 Hz (20 kHz*) and above is called radio frequency (RF) energy because it is useful in radio transmissions. The IC-R5 receives RF energy from 0.150 MHz* to 1309.995 MHz and converts it into audio frequency (AF) energy which in turn actuates a loudspeaker to create sound waves. AF energy is in the range of 20 to 20,000 Hz.

*kHz is an abbreviation of kilohertz or 1000 hertz, MHz is abbreviation of megahertz or 1,000,000 hertz, where hertz is a unit of frequency.

OPERATING NOTES

The IC-R5 may receive its own oscillated frequency, resulting in no reception or only noise reception, on some frequencies.

The IC-R5 may receive interference from extremely strong signals on different frequencies or when using an external high-gain antenna.

**Table of Contents**

- **Handling**
- **General Description**
- **Brief Description**
- **Feature Description**
- **Installation**
- **Specifications**
- **Options**
- **Pocket Guide**
- **CE**
Preparation

**Battery installation**
1. Remove the battery cover from the receiver.
2. Install 2 R6(AA) size Ni-Cd, Ni-MH or alkaline cell batteries.
   - Be sure to observe the correct polarity.
   - Charge Ni-Cd or Ni-MH batteries before use. (See the right page for charging instructions.)

   Keep battery the contacts clean. It’s a good idea to clean the battery terminals once a week.

**Antenna**
Insert the supplied antenna into the antenna connector and screw down the antenna as shown at right.

NEVER hold the antenna when carrying the receiver.

Keep the jack cover attached when jack is not in use to protect the connectors from dust and moisture.

**For your information**
Third-party antennas may increase receiver performance. An optional AD-92SMA ANTENNA CONNECTOR ADAPTER is available to connect an antenna with a BNC connector.

**Belt clip**
Conveniently attaches to your belt.

Slide the belt clip into the plastic loop on the back of the receiver.

**Handstrap**
Slide the handstrap through the loop on the side of the belt clip as illustrated at right. Facilities carrying.
Charging the battery

1. Install the Ni-Cd batteries.
   - Ni-MH batteries can also be charged.
2. Plug the AC adapter into an AC outlet.
3. Insert the adapter plug into the [DC 6V] of the receiver.
4. The battery confirmation is displayed as above right.

**WARNING!** NEVER charge the alkaline batteries.

5. Rotate [DIAL] to select “Y” then push [BAND•].
6. The charging confirmation is displayed as below.
   - Rotate [DIAL] to select “Y” then push [BAND•] to start battery charging.

- The battery indicator scrolls during charge as below.
- Both segments blink when completely charged.
Your first scanning experience

Now that you have your IC-R5 ready, you are probably excited to start listening. We would like to take you through a few basic operation steps to make your first “Scanning Experience” enjoyable.

About default setting

The [DIAL] control function can be traded with [▲]/[▼] keys function in set mode. However, in this QUICK REFERENCE GUIDE, the factory default setting ([DIAL] sets operating frequency) is used for simple instruction.

Basic operation

1. Turning ON the receiver
   ➡ Push [PWR] for 1 sec. to turn the power ON.

2. Adjusting audio level
   ➡ Push [▲]/[▼] to set the desired audio level.

3. Adjusting squelch level
   ➡ While pushing [SQL], rotate [DIAL] to set the squelch level.

4. Tune the desired frequency

   The tuning dial will allow you to dial in the frequency you want to operate. Pages 9 and 15 will instruct you on how to set the tuning speed.

   ① Push [BAND•LOC] several times to select the desired frequency band.
   • While pushing [BAND•LOC], rotate [DIAL] to select frequency band.

   ② Rotate [DIAL] to set the desired receive frequency.
   • While pushing [FUNC], rotate [DIAL] to select frequency in 1 MHz step.
Quick reference guide

IC-R5_4.qxd  05.7.13 17:06  Page IV (1,1)

5. Receive mode selection

Push [MODE•SCAN] several times to select the desired receive mode.
• FM, WFM and AM are available.

Memory programming

The IC-R5 has a total of 1250 memory channels (including 200 auto write channels and 50 scan edges) for storing often used receive frequency, mode, etc.

1. Setting frequency

In VFO mode, set the desired receive frequency mode.
• When "MR" indicator is displayed, push [V/M•S.MW•] to select the VFO mode.

2. Selecting a memory channel

Push [V/M•S.MW•] for 1 sec., then rotate [DIAL] to select the desired memory channel.
• "MR" indicator and memory channel number blink.

3. Writing a memory channel

Push [V/M•S.MW•] for 1 sec. until 3 beeps sound.
• Memory channel number automatically increases when continuing to push [V/M•S.MW•] after programming.
QUICK REFERENCE GUIDE

Programmed scan operation

25 pairs, 50 channels of memories are used for programmed scan operation, that specifying a scanning ranges. The programmed scan scans between “xxA” and “xxB” (xx=00 to 24) frequencies. Therefore, before operating the programmed scan, different frequencies must be programmed into “A” and “B” channels.

Programming scan edges

A start frequency must be programmed into a “xxA,” and end frequency must be programmed into a “xxB” memory channel.

1. Setting frequency

In VFO mode, set the desired receive frequency mode.

• When “MR” indicator is displayed, push [V/M•S.MW•] to select the VFO mode.

2. Selecting a scan edge channel “A”

Push [V/M•S.MW•] for 1 sec., then rotate [DIAL] to select one of the desired scan edge channel “A.”

• “MR” indicator and scan edge channel number blink.

3. Writing a memory channel

Push [V/M•S.MW•] for 1 sec. until 3 beeps sound.

• Scan edge channel “B” is automatically selected when continuing to push [V/M•S.MW•] after programming.

4. Selecting a scan edge channel “B”

Push [V/M•S.MW•] for 1 sec., then rotate [DIAL] to select one of the desired scan edge channel “B.”

• “MR” indicator and scan edge channel number blink.

5. Writing a memory channel

Push [V/M•S.MW•] for 1 sec. until 3 beeps sound.

• The next scan edge channel “A” is automatically selected when continuing to push [V/M•S.MW•] after programming.

• After programming is completed, return to VFO indication.
Starting scan

1. Select VFO mode.
Push [V/M•S.MW•] to select the VFO mode for full, band and programmed scan operation.
   • Select memory mode by pushing [V/M•S.MW•] again for memory or bank scan.

2. Selecting a scanning type
Push [MODE•SCAN] for 1 sec., then rotate [DIAL] to select one of the desired scanning type.
   • Available scan types when VFO mode is selected; “ALL” for full scan; “BAND” for the selected band; one of “PROGxx” (xx=0 to 24) for programmed scan.
   • Available scan types when memory bank is selected; “ALL” for all bank scan; “BANK” for the selected bank scan.

3. Starting scan
Push [MODE•SCAN] to start scan.
   • Rotate [DIAL] to change the scanning direction.

4. Cancelling scan
Push [MODE•SCAN] again to stop scan.

For your information
The memory channel number you program the scan edges into correlate “PROGxx” as follows:
00A/00B: Scans between frequencies programmed in 00A and 00B channels, and select “PROG 00”
01A/01B: Scans between frequencies programmed in 01A and 01B channels, and select “PROG 01”
23A/23B: Scans between frequencies programmed in 23A and 23B channels, and select “PROG 23”
24A/24B: Scans between frequencies programmed in 24A and 24B channels, and select “PROG 24”
1 PANEL DESCRIPTION

■ Front, top and side panels

① ANTENNA CONNECTOR (p. 1)
Connects the supplied antenna.
• An optional AD-92SMA is available for connecting an antenna
with a BNC connector.

② EXTERNAL SPEAKER CONNECTOR [SP]
Connects an optional earphone or headphone.
The internal speaker will not function when any external
equipment is connected. (See p. 65 for a list of available
options.)

③ FUNCTION SWITCH [FUNC]
While pushing this switch, access to secondary function.

④ SQUELCH SWITCH [SQL]
→ Push and hold to temporarily open the squelch and
monitor the operating frequency. (p. 13)
→ While pushing this switch, rotate [DIAL]* to adjust the
squelch level. (p. 12)

⑤ UP/DOWN SWITCHES [▲]/[▼]
Adjusts audio volume level.* (p. 11)

⑥ BAND-LOCK SWITCH [BAND-LOCK]
→ Push to select the operating frequency band. (p. 7)
→ After pushing [FUNC], push for 1 sec. to toggle the lock
function ON and OFF. (p. 10)
**PANEL DESCRIPTION**

1. **CONTROL DIAL [DIAL]**
   - Rotate to select the operating frequency. *(p. 9)*
   - While scanning, changes the scanning direction. *(p. 26)*
   - While pushing [SQL], sets the squelch level. *(p. 12)*
   - While pushing [FUNC], sets the operating frequency in 100 kHz, 1 MHz or 10 MHz in VFO mode. *(p. 9)*
   - While pushing [BAND•OFF], selects the operating band in VFO mode. *(p. 7)*

2. **EXTERNAL DC-IN CONNECTOR [DC 6V]** *(p. 6)*

   Connects an AC adapter or an optional cigarette lighter cable for both charging the installed rechargeable battery and operating.

3. **VFO/MEMORY•MEMORY WRITE SWITCH [V/M+S.MW•设定]**
   - Toggles between VFO and memory mode. *(p. 7)*
   - Push for 1 sec. to enter memory edit condition. *(p. 16)*
   - After pushing [FUNC], select scan skip condition. *(p. 30)*

4. **POWER SWITCH [PWR]**

   Push for 1 sec. to turn the receiver power ON and OFF.

5. **MODE•SCAN SWITCH [MODE•SCAN]**

   - Push to select the receive mode. *(p. 12)*
   - Push for 1 sec. to start a scan. *(p. 26)*
   - While pushing [FUNC], start a tone scan. *(p. 38)*

6. **TUNING STEP•SET SWITCH [TS•SET]**

   - Push to enter tuning step selecting mode. *(p. 9)*
   - Push for 1 sec. to enter set mode. *(p. 39)*
   - While pushing [FUNC], trade [DIAL] and [▲]/[▼] function. *(p. 49)*

*The function of [DIAL] and [▲]/[▼] can be traded. See page 49 for details.*
1 PANEL DESCRIPTION

Function display

1 FREQUENCY READOUT
Shows variety of information, such as an operating frequency, set mode contents, memory names.
- The smaller “75,” “50” and “25” to the right of the readout indicate 0.75, 0.5 and 0.25 kHz, respectively.
- The decimal point blinks during scan.

2 LOCK INDICATOR (p. 10)
Appears when the lock function is activated.

3 RECEIVE MODE INDICATOR (p. 12)
Shows the selected receive mode.
- FM, WFM and AM are available.

4 DUPLEX INDICATORS (p. 14)
"DUP" appears when plus duplex, “–DUP” appears when minus semi-duplex (repeater) operation is selected.

5 TONE INDICATORS
- “T SQL” appears while the tone squelch function is in use. (p. 35)
- “DTCS” appears while the DTCS squelch function is in use. (p. 35)
- "((••)) " appears with the “T SQL” or “DTCS” indicator while the pocket beep function (with CTCSS or DTCS) is in use. (p. 35)
① AUTO WRITE CHANNEL INDICATOR (p. 29)
Appears when auto write channel is selected.

② SKIP INDICATORS (p. 30)
➢ “SKIP” appears when the selected memory channel is specified as a skip channel.
➢ “P SKIP” appears when the displayed frequency is specified as a skip frequency.

③ PRIORITY WATCH INDICATOR (p. 33)
Appears when priority watch is in use.

④ MEMORY INDICATOR (pgs. 7, 10)
Appears when memory mode is selected.

⑤ MEMORY CHANNEL NUMBER INDICATORS
Shows the selected memory channel number. (pgs. 7, 10)

⑥ SIGNAL STRENGTH INDICATOR (p. 11)
Shows the relative signal strength while receiving signals.

⑦ VOLUME EXCHANGE INDICATOR (p. 49)
Appears when the function of [DIAL] and [▲]/[▼] are traded.

⑧ BATTERY INDICATOR
➢ Both segments appear when the installed batteries have ample capacity.
➢ They do not appear when operating with an external power source.
➢ Only the right segment “” appears when the batteries are nearing exhaustion.
➢ Scrolls while charging the installed rechargeable batteries. (p. 6)
➢ Both segments blink when completely charged.

⑨ ATTENUATOR INDICATOR (p. 13)
Appears when the RF attenuator is in use.
2 BATTERY CHARGING

■ Battery installation

Before installing, or replacing the batteries, push [PWR] for 1 sec. to turn the power OFF.

1. Remove the battery cover from the receiver.
2. Install 2 R6 (AA) size Ni-Cd or Ni-MH batteries.
   • Be sure to observe the correct polarity.

Keep the battery contacts clean to avoid rust or poor contact. It’s a good idea to clean the battery terminals once a week.

■ Caution

◊ Battery caution

• CAUTION! NEVER short the battery terminals. Also, current may flow into nearby metal objects such as a necklace, so be careful when placing battery cells in handbags, etc.
• NEVER mix old and new batteries.
• Make sure all battery cells are the same brand, type and capacity.
Either of the above may cause a fire hazard or damage the receiver if ignored.

• NEVER incinerate used battery cells. Internal battery gas may cause explosion.

If your re-chargeable batteries seem to have no capacity even after being charged, completely discharge them by leaving the power ON overnight. Then fully charge the batteries again. If the batteries still does not retain a charge (or very little charge), a new battery cells must be purchased.

◊ Charging caution

WARNING! NEVER charge dry or alkaline batteries.

AVOID over charging — The installed re-chargeable batteries can be charged during operation when the AC adapter or the optional cigarette lighter cable is connected. To prevent over charging, the IC-R5 has charging timer that automatically disconnecting the charging line electronically after 15 hours from charging. However, the charging timer will reset and start charging again when disconnect then re-connecting the AC adapter or CP-18A/E more than 1 min. interval.

• Recommended temperature for charging:
  ±0°C to +40°C (; +32°F to +140°F)

• Connect the supplied (or optional for UK and Italy versions) AC adapter or optional cigarette lighter cable only when charging the installed Ni-Cd or Ni-MH batteries. NEVER use other manufactures’ chargers.

CAUTION: BE SURE to disconnect the CP-18A/E from the cigarette lighter socket when charging is finished, because, a slight current still follows in the CP-18A/E and the vehicle’s battery will become exhausted.
Battery charging

Charging connections

- **Charging periods**: Approx. 10 hours

Charging description

1. Install the Ni-Cd batteries. (See left page)
   - Ni-MH batteries can also be charged.
2. Plug the AC adapter into an AC outlet; or the optional CP-18A/E into a cigarette lighter socket.
3. Insert the adapter plug into [DC 6V] of the receiver.
   - Once the batteries are removed for more than 2 sec., the following operations are necessary.
4. The battery type confirmation is displayed as above right.
   - When no confirmation display is indicated, insert the adapter plug while pushing [FUNC].
5. Rotate [DIAL] to select “Y” then push [BAND•LCD].
6. The charging confirmation is displayed.
7. Rotate [DIAL] to select “Y” then push [BAND•LCD] to start battery charging.

- The battery indicator scrolls during charge as below.
- When the batteries are charged completely, the battery indicator (both segments) blinks.
- Takes approximately 10 hours for fully charge with the supplied Ni-Cd cells.
FREQUENCY AND CHANNEL SETTING

■ VFO and memory channels
The IC-R5 has 2 normal operating modes: VFO mode and memory mode.

**VFO mode** is used for the desired frequency setting within the frequency coverage.
➥ Push [V/M•S.MW•~] to select VFO mode.

**Memory mode** is used for the desired frequency setting within the frequency coverage.
➥ Push [V/M•S.MW•~] to select memory mode.
  • See p. 16 for memory programming details.

**What is VFO?**
VFO is an abbreviation of Variable Frequency Oscillator. Frequencies for receiving are generated and controlled by the VFO.

■ Operating band selection
The receiver can receive the AM broadcast, HF band, 50 MHz, FM broadcast, VHF air, 144 MHz, 300 MHz, 400 MHz, 800 MHz,* 1200 MHz, television channels or Weather channels†.

➥ Push [BAND•] several times to select the desired frequency band.
  • When a memory mode is selected, push [V/M•S.MW•~] to select VFO mode first, then push [BAND•] to select the desired band.
  • While pushing and holding [BAND•], rotating [DIAL] also selects frequency band.

Available frequency bands are different depending on version. See the specification for details.
*Some frequency ranges are inhibited for the USA version due to local regulation.
†Available for the USA version only.
FREQUENCY AND CHANNEL SETTING

Available frequency bands

- **AM broadcast band**
  - 1.620 MHz

- **HF band**
  - 5.000 MHz

- **50 MHz band**
  - 51.000 MHz

- **FM broadcast band**
  - 76.000 MHz

- **Weather channels**
  - 118.000 MHz

- **VHF air band**
  - 146.010 MHz

- **TV channels**
  - 1295.000 MHz

- **1200 MHz band**
  - 850.000 MHz

- **800 MHz band**
  - 440.000 MHz

- **400 MHz band**
  - 370.000 MHz

- **300 MHz band**
  - 144 MHz band

**Showing initial frequencies are differ according to version.**

*Available for the USA version only

†Appears only when TV channels are programmed via the optional CS-R5.
3 FREQUENCY AND CHANNEL SETTING

■ Setting a frequency

1. Push [V/M•S.MW•STEP] to select VFO mode, if necessary.
2. Select the desired frequency band with [BAND•LOCK].
   - Or, while pushing and holding [BAND•LOCK], rotate the [DIAL] to select the desired frequency band.
3. Rotate [DIAL] to select the desired frequency band.
   - The frequency changes according to the preset tuning steps.
   - While pushing and holding [FUNC], rotate [DIAL] to change the frequency in 1 MHz steps (default).

The 1 MHz tuning step (dial select step) can be set to 100 kHz, 1 MHz or 10 MHz tuning steps in set mode. See p. 15 for details.

■ Setting a tuning step

The tuning step can be selected for each frequency band, however, the tuning steps, 8.33 kHz and 9 kHz, are appeared when setting the tuning step for the VHF air band and AM broadcast band, respectively. The following tuning steps are available for the IC-R5.

- 5.0 kHz
- 6.25 kHz
- 8.33 kHz
- 9.0 kHz
- 10.0 kHz
- 12.5 kHz
- 15.0 kHz
- 20.0 kHz
- 25.0 kHz
- 30.0 kHz
- 50.0 kHz
- 100.0 kHz

♦ Tuning step selection

1. Push [V/M•S.MW•STEP] to select VFO mode, if necessary.
2. Push [BAND•LOCK] to select the desired frequency band.
   - Or, while pushing and holding [BAND•LOCK], rotate the [DIAL] to select the desired frequency band.
4. Rotate [DIAL] to select the desired tuning step.
5. Push [TS•SET] to return to VFO mode.
Selecting a memory channel

1. Push [V/M•S.MW•] to select the memory mode.
   - "" appears when a memory channel is selected.
2. Rotate [DIAL] to select the desired memory channel.
   - Only programmed memory channels can be selected.
   - While pushing and holding [FUNC], rotate [DIAL] to select a memory channel in 10 channels steps.

Lock function

To prevent accidental frequency changes and unnecessary function access, use the lock function.

- While pushing [FUNC], push [BAND•LOCK] for 1 sec. to turn the lock function ON and OFF.
  - "" appears while the lock function is activated.
  - [SQL] and [▲]/[▼] can be used while the lock function is in use with default setting. Either or both [SQL] and [▲]/[▼] keys are also be locked in set mode. (p. 43)
BASIC OPERATION

Receiving
Make sure charged Ni-Cd or brand new alkaline batteries are installed (p. 5).

1. Push [PWR] for 1 sec. to turn power ON.
2. Push [▲] or [▼] to set the desired audio level.
   • The frequency display shows the volume level while setting. See the section at right for details.
3. Set the receiving frequency. (p. 9)
4. Set the squelch level. (p. 12)
   • While pushing [SQL], rotate [DIAL].
   • The first click of [DIAL] indicates the current squelch level.
   • “LEVEL 1” is loose squelch and “LEVEL 9” is tight squelch.
   • “AUTO” indicates automatic level adjustment with a noise pulse count system.
   • Push and hold [SQL] to open the squelch manually.
5. When a signal is received:
   • Squelch opens and audio is emitted.
   • The S-meter shows the relative signal strength level.

Setting audio volume
The audio level can be adjusted through 32 levels.

Push [▲] or [▼] to adjust the audio level.

• Beep tone sounds while setting. The tone sound let you know the approximate sound level.
• Pushing and holding either key change the audio level continuously.
• The display shows the volume level while setting.

Minimum setting (no audio)
Initial setting
Maximum setting

Push for setting the squelch (Push to monitor)
**Squelch level setting**

The squelch circuit mutes the received audio signal depending on the signal strength. The receiver has 9 squelch levels, a continuously open setting and an automatic squelch setting.

- While pushing and holding [SQL], rotate [DIAL] to select the squelch level.
  - "LEVEL 1" is loose squelch and "LEVEL 9" is tight squelch.
  - "AUTO" indicates automatic level adjustment with a noise pulse count system.
  - "OPEN" indicates continuously open setting.

**Receive mode selection**

Receive modes are determined by the physical properties of the radio signals. The receiver has 3 receive modes: FM, AM and WFM modes. The mode selection is stored independently in each band and memory channels.

Typically, AM mode is used for the AM broadcast stations (0.495–1.620 MHz) and air band (118–135.995 MHz), and WFM is used for FM broadcast stations (76–107.9 MHz).

- Push [MODE•SCAN] several times to select the desired receive mode.

4 BASIC OPERATION

■ Monitor function

This function is used to listen to weak signals without disturbing the squelch setting or to open the squelch manually even when mute functions such as the tone squelch are in use.

➢ Push and hold [SQL] to monitor the operating frequency.
• The 1st segment of the S-meter blinks.

![Monitor function](image)

The [SQL] switch can be set to ‘sticky’ operation in expanded set mode. See page 43 for details.

■ Attenuator function

The attenuator prevents a desired signal from distorting when very strong signals are near the desired frequency or when very strong electric fields, such as from a broadcasting station, are near your location.

➢ While pushing [FUNC], push [SQL] to toggle the attenuator function ON and OFF.
• “ATT” appears when the attenuator functions is in use.

![Attenuator function](image)
Duplex operation

Duplex communication uses 2 different frequencies for transmitting and receiving. Generally, duplex is used in communication through a repeater, some utility communications, etc.

During duplex operation, the transmit station frequency is shifted from the receive station frequency by the offset frequency. Repeater information (offset frequency and shift direction) can be programmed into memory channels. (p. 16)

Setting

1. Set the receive station frequency (repeater output frequency).
2. Push [TS•SET] for 1 sec. to enter set mode.
3. Rotate [DIAL] to select “EXPAND.”
   - “EXPAND” disappears after 1 sec. and “OFF” (default) and “EX” appear.
4. While pushing [FUNC], rotate [DIAL] to select “ON.”
5. Rotate [DIAL] to select “OFFSET.”
   - “OFFSET” disappears after 1 sec. and “0.000” (default) and “OW” appear.
6. While pushing [FUNC], rotate [DIAL] to set the desired offset frequency within 0.000–159.995 MHz range.
   - The tuning step, selected in VFO mode, is used for setting.
7. Rotate [DIAL] to select “DUP.”
   - “DUP” disappears after 1 sec. and “OFF” (default) and “DP” appear.
8. While pushing [FUNC], rotate [DIAL] to select “–DUP” or “+DUP.”
10. Push and hold [SQL] to monitor the transmit station frequency (repeater input frequency) directly.
4  BASIC OPERATION

■ Dial select step

This receiver has a 1 MHz tuning step for quick frequency setting. This dial select step can be set to 100 kHz, 1 MHz or 10 MHz steps, as desired.

◊ Setting dial select step

① Select VFO mode with [V/M•S.MW•].
② Push [TS•SET] for 1 sec. to enter set mode.
③ Rotate [DIAL] to select “D SEL.”
  • “D SEL” disappears after 1 sec. and “1M” (default) and “DS” appear.
④ While pushing [FUNC], rotate [DIAL] to select the desired dial select step.
  • 100 kHz, 1 MHz and 10 MHz can be selected.
⑤ Push [TS•SET] momentarily to exit set mode.

![Diagram of dial and settings](IC-R5_4.qxd 05.7.13 17:06 Page 15 (1,1))
MEMORY CHANNELS

General description
The receiver has 1050 memory channels including 50 scan edge memory channels (25 pairs) for storage of often-used frequencies. And a total of 18 memory banks, A to H, J, L, N, O to R, T, U and Y are available for usage by group, etc. Up to 100 channels can be assigned into a bank.

Memory channel contents
The following information can be programmed into memory channels:
• Operating frequency (p. 9)
• Receive mode (p. 12)
• Duplex direction (DUP or –DUP) with an offset frequency (p. 14)
• Tone squelch or DTCS squelch ON/OFF (p. 35)
• Tone squelch frequency or DTCS code with polarity (pgs. 36, 37)
• Scan skip information* (p. 30).

Memory channel programming
1. Push [V/M•S.MW•] to select VFO mode.
2. Set the desired frequency:
   ➤ Select the desired band with [BAND•].
   ➤ Set the desired frequency with [DIAL].
   ➤ Set other data (e.g. offset frequency, duplex direction, tone squelch, etc.), if desired.
3. Push [V/M•S.MW•] for 1 sec. to select select memory write condition.
   • 1 short and 1 long beep sound.
   • MHz indicator memory channel number blink.
4. Rotate [DIAL] to select the desired channel.
   • Scan edge channel, 00A/B to 24A/B can also be selected.
   • While pushing [FUNC], rotate [DIAL] to selects memory channel in 10 channels steps.
5. Push [V/M•S.MW•] for 1 sec.
   • 3 beeps sound
   • Memory channel number automatically increases when continuing to push [V/M•S.MW•] after programming.

[EXAMPLE]: Programming 145.870 MHz into memory channel 20 (blank channel).

Push $ for 1 sec. Rotate $ Push $ for 1 sec.

145.870 145.870 145.870 145.870
5 MEMORY CHANNELS

■ Memory bank setting

The IC-R5 has a total of 18 banks (A to H, J, L, N, O to R, T, U and Y). Regular memory channels, 000 to 999, are assigned into the desired bank for easy memory management.

1. Push [V/M•S.MW•[REP]] for 1 sec. to select memory write condition.
   • 1 short and 1 long beep sound.
   • “MEM” indicator memory channel number blink.
2. Rotate [DIAL] to select the desired memory channel.
3. While pushing [MODE•SCAN], rotate [DIAL] to select “BANK.”
   • After releasing [MODE•SCAN], “-- -- -- --” is displayed instead of the frequency indication, and only “MEM” indicator blinks.
   • Bank group and channel number is displayed if the selected memory channel has already been assigned into a bank, the previous.
   • “BANK” item can also be selected by pushing [MODE•SCAN] several times.
4. While pushing [BAND•LOCK], rotate [DIAL] to select the desired bank group.
   • Bank group A to H, J, L, N, O to R, T, U and Y are available.
   • The bank group can also be selected by pushing [BAND•LOCK] several times.
5. Rotate [DIAL] to select the desired bank channel number.
   • Vacant bank channel numbers only are displayed.
6. Push [V/M•S.MW•[REP]] momentarily to set the channel into the bank.
   • Return to the previous indication.
Memory bank selection

1. Push [V/M•S.MW•~] to select memory mode, if desired.
2. While pushing [BAND•LOCK], rotate [DIAL] to select the desired bank (A to H, J, L, N, O to R, T, U and Y).
   - The bank can also be selected by pushing [BAND•LOCK] several times.
   - The only programmed banks are displayed.
3. Rotate [DIAL] to select the bank channel.
   - The only programmed channels are displayed.
4. To return to regular memory condition, rotate [DIAL] while pushing [BAND•LOCK], or push [BAND•LOCK] several times.
5 MEMORY CHANNELS

Programming memory/bank name

Each memory channel can be programmed with an alphanumerical channel name for easy recognition and can be indicated independently by channel. Names can be a maximum of 6 characters.

1. Push [V/M•S.MW•] to select memory mode.
2. Rotate [DIAL] to select the desired memory channel.
3. Push [V/M•S.MW•] for 1 sec. to select select memory write condition.
   • 1 short and 1 long beep sound.
   • "MEM" indicator and memory channel number blink.

4. While pushing [MODE•SCAN], rotate [DIAL] to select "M NAME" or "B NAME" when programming the memory name or the bank name, respectively.
   • The item can also be selected by pushing [MODE•SCAN] several times.
   • After releasing [MODE•SCAN], an under bar blinks for the first digit instead of the frequency indication, and only "MEM" indicator blinks.

   Memory name selection  Bank name selection
   
   M NAME  B NAME

5. While pushing [FUNC], rotate [DIAL] to select the desired character.
   • The selected character blinks.

6. Rotate [DIAL] to move the cursor to left or right.

   Memory name  Bank name
   
   FM DUP SQL

7. Repeat steps 5 and 6 until the desired 6-character channel names are displayed.

8. Push [MODE•SCAN] several times, or rotate [DIAL] while pushing [MODE•SCAN] to select "S.MW" item.

9. Push [V/M•S.MW•] for 1 sec. to program the name and exit the channel name programming condition.
   • 3 beeps sound.

• Available characters
  A to Z, 0 to 9, (, ), ✱, +, −, ,, /, |, = and space.

NOTE: The bank name can only be programmed into each bank. Therefore, previously programmed bank name will be displayed when bank name indication is selected. And also, the programmed bank name is assigned for the other bank channels automatically.
## Selecting display type

During memory mode operation, one of the programmed memory name, bank name or the channel number can be displayed instead of the frequency for your preference.

1. Push [V/M•S.MW•] to select memory mode.
2. [BAND•LOCK] to select the desired bank group.
3. While pushing [FUNC], push [BAND•LOCK] to select display type from frequency, bank name, memory name and channel number indications.

---

### Selecting bank channel indication

During bank channel operation, the bank channel number can also be displayed instead of the memory channel number indication.

- After selecting channel number indication as described at left, push [BAND•LOCK] to select the desired bank.
5 MEMORY CHANNELS

■ Copying memory contents

This function transfers a memory channel’s contents to VFO (or another memory channel). This is useful when searching for signals around a memory channel frequency and for recalling the offset frequency, subaudible tone frequency etc.

◊ Memory ➪ VFO

1. Select the memory channel to be copied.
   ➤ Push [V/M•S.MW•] to select memory mode, then rotate [DIAL] to select the desired memory channel.
   • Select the bank channel with [BAND•] and [DIAL], if desired.
2. Push [V/M•S.MW•] for 1 sec. to select select memory write condition.
   • 1 short and 1 long beep sound.
   • “MEM” indicator memory channel number blink.
3. Rotate [DIAL] to select “VF.”
4. Push [V/M•S.MW•] for 1 sec. again.
   • VFO mode is selected automatically.

◊ Memory ➪ memory

1. Select the memory channel to be transferred.
   ➤ Push [V/M•S.MW•] to select memory mode, then rotate the tuning dial to select the desired memory channel.
2. Push [V/M•S.MW•] for 1 sec. to select select memory write condition.
   • 1 short and 1 long beep sound.
   • “MEM” indicator memory channel number blink.
   • Do not hold [V/M•S.MW•] for more than 1 sec. otherwise the memory contents will be copied to VFO.
3. Rotate [DIAL] to select the target memory channel.
4. Push [V/M•S.MW•] for 1 sec. again to transfer.

[EXAMPLE]: Copying channel 20 to 51.

Select memory channel

Pushing [V/M•S.MW•] for 2 sec. at the step 2, can also be copied the memory contents to VFO. In this case, the steps 3 and 4 are not necessary.
Memory clearing

Contents of programmed memories can be cleared (blanked), if desired.

1. Push [V/M•S.MW•] for 1 sec. to select memory write condition.
   - 1 short and 1 long beeps sound.
   - “MEM” indicator and memory channel number blink.
   - Do not hold [V/M•S.MW•] for more than 2 sec. otherwise the memory contents will be copied to VFO.

2. Rotate [DIAL] to select the desired memory channel to be cleared.

3. While pushing [MODE•SCAN], rotate [DIAL] to select “CLEAR.”
   - After releasing [MODE•SCAN], “CLR” is displayed instead of the frequency indication, and only “MEM” indicator blinks.
   - “CLEAR” item can also be selected by pushing [MODE•SCAN] several times.

4. Push [V/M•S.MW•] for 1 sec. to clear the contents.
   - 3 beeps sound.
   - Return to VFO or memory mode, if VFO is selected before performing the step 1.
   - Return to select memory write conditions if memory mode is selected before performing the step 1. — “MEM” indicator memory and channel number blink. Push [V/M•S.MW•] momentarily to return to memory mode.

   ![Diagram]

   While pushing [FUNC], push [V/M•S.MW•] for 1 sec. after the step 2 is operated can also be cleared the memory contents. In this case, the steps 3 and 4 are not necessary.

   **NOTE:** Be careful! — the contents of cleared memories CANNOT be re-called even in bank channel operation.
5 MEMORY CHANNELS

Transferring memory contents

Contents of programmed memory channels can be transferred to another memory.

1. Push [V/M•S.MW•~] for 1 sec. to enter select memory write condition.
   - 1 short and 1 long beeps sound.
   - "M" indicator and memory channel number blink.
   - Do not hold [V/M•S.MW•~] for more than 2 sec. otherwise the memory contents will be copied to VFO.

2. Rotate [DIAL] to select the desired memory channel to be transferred.

3. While pushing [MODE•SCAN], rotate [DIAL] to select "CLEAR" item.
   - Pushing [MODE•SCAN] several times also "CLEAR" item is selectable.

4. Push [V/M•S.MW•~] for 1 sec.
   - The displayed contents are cleared.

CONVENIENT!

Instead of the steps 3 and 4 operations, while pushing and holding [FUNC], push [V/M•S.MW•~] for 1 sec. also clearing the contents.

5. Rotate [DIAL] to select the desired target memory channel.

6. Push [V/M•S.MW•~] for 1 sec. to transfer the contents.

Example—Transferring the contents of memory channel 20 to channel 30.
Erasing/transferring bank contents

Contents of programmed memory channels can be or transferred to another memory.

**INFORMATION:** Even if the memory bank contents are cleared, the memory channel contents still remain programmed.

1. Select the desired bank contents to be transferred or erased from the bank.
   - Push [V/M•S.MW•] to select memory mode.
   - While pushing [BAND•LOCK], rotate the [DIAL] to select the desired memory bank group.
   - Rotate [DIAL] to select the bank channel.
     - Bank initial stops blinking.
     - Select the bank channel with [BAND•LOCK] and [DIAL], if desired.
     - Bank initial blinks.

2. Push [V/M•S.MW•] for 1 sec. to enter select memory write condition.
   - 1 short and 1 long beeps sound.
   - Displays the original memory channel number automatically and "MW" indicator and memory channel number blink.
   - Do not hold [V/M•S.MW•] for more than 2 sec. otherwise the bank contents will be copied to VFO.

   Push [V/M•S.MW•] for 1 sec.

3. While pushing [MODE•SCAN], rotate [DIAL] to select "BANK" item.
   - Pushing [MODE•SCAN] several times, "BANK" item is also selectable.

4. While pushing [BAND•LOCK], rotate [DIAL] to select the desired bank group to be transfer.
   - Select "...--..." indication when erasing the contents from the bank.

   When transferring

5. Rotate [DIAL] to select the desired bank channel.

6. While pushing [MODE•SCAN], rotate [DIAL] to select "S.MW" item.
   - Pushing [MODE•SCAN] several times, "S.MW" item is also selectable.

7. Push [V/M•S.MW•] for 1 sec.
6 SCAN OPERATION

Scan types

Scanning searches for signals automatically and makes it easier to locate new stations for contact or listening purposes.

There are 7 scan types and 4 resume conditions to suit your operating needs.

- **FULL SCAN** (p. 26)
  - Repeatedly scans all frequencies over the entire band.
  - Some frequency ranges are not scanned according to the frequency coverage of the receiver’s version.

- **SELECTED BAND SCAN** (p. 26)
  - Repeatedly scans all frequencies over the entire selected band.

- **PROGRAMMED SCAN** (p. 26)
  - Repeatedly scans between two user-programmed frequencies. Used for checking for frequencies within a specified range such as repeater output frequencies, etc.

- **ALL/SELECTED BANK SCAN** (p. 28)
  - Repeatedly scans all bank channels or selected bank channels. The skip scan is also available.

- **MEMORY (SKIP) SCAN** (p. 28)
  - Repeatedly scans memory channels except those set as skip channels. Skip channels can be turned ON and OFF by pushing [FUNC] + [V/M+S.MW•S•M] in memory mode.

- **FREQUENCY/MEMORY SKIP FUNCTION** (p. 30)
  - Skips unwanted frequencies or channels that inconveniently stop scanning. This function can be turned ON and OFF by pushing [FUNC] + [V/M+S.MW•S•M] in either VFO or memory mode.
Full/band/programmed scan

1. Select VFO mode with [V/M•S.MW].
2. Select the desired frequency band with [BAND•], if desired.
3. Push [MODE•SCAN] for 1 sec. to enter scanning type selection condition.
4. Rotate [DIAL] to select the desired scanning type.
   - "ALL" for full scan; "BAND" for band scan, "PROGxx" for programmed scan (xx= 0 to 24; programmed scan edges numbers only displayed)
5. To start the scan, push [MODE•SCAN].
   - Scan pauses when a signal is received.
   - Rotate [DIAL] to change the scanning direction, or resumes manually.
   - Push [MODE•SCAN] again to stop the scan.

• During full/band scan

• During programmed scan

NOTE: Instead of the steps 3 to 5 operations, while pushing and holding [MODE•SCAN], rotate [DIAL] to select the desired scan type. In this case, scan starts when releasing [MODE•SCAN].

About the scanning steps: The selected tuning step in each frequency band (in VFO mode) is used during scan.
6 SCAN OPERATION

■ Scan edges programming

Scan edges can be programmed in the same manner as memory channels. Scan edges are programmed into scan edges, 00A/00B to 24A/24B, in memory channels.

1. Push [V/M•S.MW•] to select VFO mode.
2. Set the desired frequency:
   - Select the desired band with [BAND•].
   - Set the desired frequency with [DIAL].
   - Set other data (e.g. offset frequency, duplex direction, tone squelch, etc.), if desired.
3. Push [V/M•S.MW•] for 1 sec. to select select memory write condition.
   - 1 short and 1 long beeps sound.
   - "MW" indicator and memory channel number blink.
4. Rotate [DIAL] to select the desired programmed scan edge channel from 00A to 24A.
5. Push [V/M•S.MW•] for 1 sec.
   - 3 beeps sound
   - The other scan edge channel “B,” 00B to 24B, automatically selected when continuing to push [V/M•S.MW•] after programming.
6. To program a frequency for the other pair of scan edges, 00B or 24B, repeat steps 2 and 4.
   - If the same frequency is programmed into a pair of scan edges, programmed scan will not function.

[EXAMPLE]: Programming 145.300 MHz into scan edges 03A.
SCAN OPERATION

Memory/bank/all bank scan

1. Select memory mode with [V/M•S.MW•].
   - Select the desired bank with [BAND•] for bank scan.
2. Set the squelch to the point where noise is just muted.
3. Push [MODE•SCAN] for 1 sec. to:
   - When memory mode is selected at the step 1:
     - start memory scan.
   - When a bank channel is selected at the step 2:
     - enter scan type selection mode.
4. Rotate [DIAL] to select the desired scanning type.
   - “ALL” for all bank scan; “BANK” for bank scan.
5. Push [MODE•SCAN] momentarily to start all bank or bank scan.
   - Scan pauses when a signal is received.
   - Rotate [DIAL] to change the scanning direction, or resumes manually.
6. To stop the scan, push [MODE•SCAN].

IMPORTANT!: To perform memory or bank scan, 2 or more memory/bank channels MUST be programmed, otherwise the scan never starts.
6 SCAN OPERATION

Auto memory write scan

This scan is useful for searching a specified frequency range and automatically storing busy frequencies into memory channels. The same frequency ranges used for program scan are used for auto memory write scan.

1. Select VFO mode with [V/M•S.MW•].
2. Push [MODE•SCAN] for 1 sec. to enter scanning type selection condition.
3. Rotate [DIAL] to select the desired scanning type.
   - “ALL” for full scan; “BAND” for band scan, “PROGxx” for programmed scan (xx= 0 to 24; programmed scan edges numbers only displayed)
4. Push [MODE•SCAN] to start the scan.
5. Push [V/M•S.MW•] to turn the automatic memory write function ON and OFF.
   - “MW” indicator blinks.

During auto-memory write scanning:
- When signal is received, scan pauses and the frequency is stored into auto memory write channel group (“000~”199).
- 2 short beeps sound when stored.
- Scan resumes after frequency storing.
- When all channels are stored, the scan cancels automatically and 1 long beep sounds.

Re-calling the stored frequencies:
1. Push [V/M•S.MW•] to select memory mode.
2. Push [BAND• 
   ] several times, or while pushing [BAND• 
   ], rotate [DIAL] to select the auto memory write channel group.
   - “R” appears.
3. Rotate [DIAL] to select the desired channel.

Clearing the stored frequencies:
1. Select the auto memory write channel group.
2. While pushing [FUNC], push [V/M•S.MW•] for 1 sec. to clear the all channels contents.
   - 1 short and 1 long beeps sound.

NOTE: The auto memory write channel contents CANNOT be cleared by an independent channel. Thus it is good idea to copy the contents into regular memory channel.
■ Skip channel/frequency setting

Memory channels can be set to be skipped for memory skip scan. In addition, memory channels can be set to be skipped for both memory skip scan and frequency skip scan. These are useful to speed up the scan interval.

1. Select a memory channel:
   ➪ Push [V/M•S.MW•] to select memory mode.
   ➪ Rotate [DIAL] to select the desired channel to be a skip channel/frequency.
2. Push [V/M•S.MW•] for 1 sec. to enter select memory write condition.
3. Push [MODE•SCAN] several times to select “SKIP” item.
   • While pushing [MODE•SCAN], rotating [DIAL] can also select “SKIP” item.

4. While pushing [FUNC], rotate [DIAL] to select the skip condition from “SKIP,” “PSKIP” or “OFF” for the selected channel.
   • SKIP : The channel is skipped during memory or bank scan.
   • PSKIP : The channel is skipped during memory/bank scan and the programmed frequency is skipped during VFO scan, such as programmed scan.
   • OFF : The channel or programmed frequency is scanned during any scan.
5. Push [MODE•SCAN] several times, or while pushing and holding [MODE•SCAN] rotate [DIAL] to select “S.MW” item.
6. Push [V/M•S.MW•] for 1 sec. to set the skip condition.
   • “SKIP” or “P SKIP” indicator appears, according to the skip selection in the step 4.

- Skip channel setting
- Program skip setting

✔ CONVENIENT!
The skip setting can also be set with the following operation for easy setting.

1. Select the desired memory channel to be set as a skip channel/frequency.
2. While pushing [FUNC], push [V/M•S.MW•] to select the skip condition from “SKIP,” “P SKIP” and “OFF (no indication).”
6 SCAN OPERATION

■ Scan resume condition

❖ Scan pause timer
The scan pauses when receiving signals according to the
scan pause time. It can be set from 2–20 sec. or unlimited.

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select “EXPAND” item.
3. While pushing [FUNC], rotate [DIAL] to turn the expand set
mode selection ON.
4. Rotate [DIAL] to select “PAUSE” item.
5. While pushing [FUNC], rotate [DIAL] to set the desired
scan pausing time from 2–20 sec. (2 sec. steps) and
“HOLD.”
   • “2SEC”–“20SEC”: Scan pauses 2–20 sec. while receiving a sig-
   nal.
   • “HOLD”: Scan pauses on a received a signal until it
disappears.

❖ Resume timer setting

❖ Resume timer setting

❖ Scan resume timer
The scan re-starts after a signal disappears according to the
resume time. It can be set from 0–5 sec. or unlimited.

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select “EXPAND” item.
3. While pushing [FUNC], rotate [DIAL] to turn the expand set
mode selection ON.
4. Rotate [DIAL] to select “RESUME” item.
5. While pushing [FUNC], rotate [DIAL] to set the desired
scan pausing time from 0–5 sec. (1 sec. steps) and
“HOLD.”
   • “0SEC” : Scan restarts immediately after the signal dis-
   appears.
   • “1SEC”–“5SEC” : Scan restarts 1–5 sec. after the signal disap-
   pears.
   • “HOLD” : Scan restarts by rotating [DIAL] only.
Priority watch types

Priority watch checks for signals on a frequency every 5 sec. while operating on a VFO frequency or scanning. The receiver has 3 priority watch types to suit your needs.

The watch resumes according to the selected scan resume condition. See the left page for details.

NOTES:
If the pocket beep function is activated, the receiver automatically selects the tone squelch function when priority watch starts.

About priority beep function
When receiving a signal on the priority frequency, you can be alerted with beeps and a blinking “(••)”. This function can be activated when setting the priority watch function ON.

 MEMORY CHANNEL WATCH
While operating on a VFO frequency, priority watch checks for a signal on the selected memory channel every 5 sec.
• A memory channel with skip information can be watched.

 MEMORY SCAN WATCH
While operating on a VFO frequency, priority watch checks for signals on each memory channel in sequence.
• The memory skip function and/or memory bank scan is useful to speed up the scan.

 VFO SCAN WATCH
While scanning on VFO mode, priority watch checks for signals on the selected memory channel every 5 sec.
7 PRIORITY WATCH

■ Priority watch operation

Diamond Memory channel watch and memory scan watch

1. Select VFO mode; then, set an operating frequency.
   - TV channel can also be selected.
2. Set the watching channel(s).
   - For memory channel watch: Select the desired memory channel.
   - For memory scan watch: Select memory mode, or the desired bank group; then, push [MODE SCAN] for 1 sec. to start memory/bank scan.
4. Rotate [DIAL] to select “PRIO” item.
5. While pushing [FUNC], rotate to turn the priority watch ON.
   - Select “BELL” if the priority beep function is necessary.

   - “PRIO” indicator appears.
   - The receiver checks the memory/bank channel(s) every 5 sec.
   - The watch resumes according to the selected scan resume condition. (p. 31)

- During priority watch
  - Monitors VFO frequency for 5 sec.
  - Pauses on a memory (bank) channel when a signal is received.

- During priority watch with priority beep
  - Emits beep and blinks “(●)” indicator when a signal is received on a memory (bank) channel.

VFO scan watch

1. Select memory mode.
   - Select a memory bank, if desired.
2. Push [MODE•SCAN] for 1 sec. to start memory/bank scan, if desired.

When scanning memory/bank channels:
- Starts memory/bank scan first. Memory/bank scan cannot be started after VFO scan is started.

3. Push [TS•SET] for 1 sec. to enter set mode.
4. Rotate [DIAL] to select “PRIO” item.
5. While pushing [FUNC], rotate to turn the priority watch ON.
   - Select “BELL” if the priority beep function is necessary.
6. Push [TS•SET] to exit set mode and start the watch.
   - “PRIO” indicator appears.
7. Push [MODE•SCAN] for 1 sec. to enter scan type selection condition.
8. Rotate [DIAL] to select the desired scan type from “ALL,” “BAND” and “PROGxx (xx= 0–24).”
9. Push [MODE•SCAN] to start the VFO scan watch.
   - The receiver checks the memory channel(s) every 5 sec.
   - The watch resumes according to the selected scan resume condition. (p. 31)
10. Push [TS•SET] to cancel the watch and scan.

- During VFO scan watch

Searches VFO frequencies for 5 sec.
Pauses on a memory (bank) channel when a signal is received.

- During VFO scan watch with priority beep

Emits beep and blinks “(•)” indicator when a signal is received on a memory (bank) channel.
Tone/DTCS squelch operation

The tone or DTCS squelch opens only when receiving a signal with the same pre-programmed subaudible tone or DTCS code, respectively. You can silently wait for the specified signal using the same tone.

1. Set the desired frequency in FM mode.
2. Push [TS•SET] for 1 sec. to enter set mode.
3. Rotate [DIAL] to select “EXPAND” item.
4. While pushing [FUNC], rotate [DIAL] to turn the expanded set mode ON.
5. Rotate [DIAL] to select “TSQL” item.
6. While pushing [FUNC], rotate [DIAL] to select the desired subaudible tone condition from “TSQL,” “P BEEP,” “DTCS,” “P DTCS” and “OFF.”
7. Push [TS•SET] to exit set mode.
   - One of “TSQL,” “TSQ (i)”, “DTCS” or “(i) DTCS” appears according to the tone selection in the step 6.

</tr>
</tbody>
</table>

8. When a signal with the matched tone is received, the squelch opens and the receiver emits audio. When pocket beep function is activated, the receiver also emits beep tones and blinks “(i)”. Beep tones sound and “(i)” blinks for 30 sec.
   - “(i)” disappears and the pocket beep function is deactivated.
10. To cancel the tone squelch or DTCS, select “OFF” with the “TSQL” item in the expanded set mode, as described in the step 6.
Tone squelch frequency/DTCS code setting

88.5 Hz and 023 is set as the default for the tone squelch frequency and the DTCS code, respectively. The frequency and code can be selected as desired.

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select "EXPAND" item.
3. While pushing [FUNC], rotate [DIAL] to turn the expanded set mode ON.
4. Rotate [DIAL] to select "TONE" item when selecting the tone squelch frequency; select “CODE” item when selecting the DTCS code.
5. While pushing [FUNC], rotate [DIAL] to select the desired subaudible tone frequency or DTCS code.

8 TONE SQUELCH AND POCKET BEEP

DTCS polarity setting

As well as the code setting, the polarity setting is also available for the DTCS operation. When a different polarity is set, the DTCS never releases audio mute even a signal with matched code number is received.

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select “EXPAND” item.
3. While pushing [FUNC], rotate [DIAL] to turn the expanded set mode ON.
4. Rotate [DIAL] to select “DTCS P” item.

5. While pushing [FUNC], rotate [DIAL] to select the polarity from normal (NORMAL) and reverse (REV).

TONE SQUELCH AND POCKET BEEP

Tone scan

By monitoring a signal that is being operated with pocket beep, tone or DTCS squelch function, you can determine the tone frequency or DTCS code necessary to open a squelch.

1. Set the frequency to be checked for a tone frequency or code.
2. Turn the desired tone type, tone squelch or DTCS, ON in expanded set mode.
   • One of “TSQL” or “DTCS” appears.
   • Even the pocket beep function is activated, the function is cancelled when starts the tone scan.
3. While pushing [FUNC], push [MODE•SCAN] to start the tone scan.
   • To change the scanning direction, rotate [DIAL].

When the CTCSS tone frequency or 3-digit DTCS code is matched, the squelch opens and the tone frequency or code is temporarily programmed into the selected condition, such as memory channel.
• The tone scan pauses when a CTCSS tone frequency or 3-digit DTCS code is detected.

NOTE: The decoded tone frequency or code is programmed temporarily when a memory channel is selected. However, this will be cleared when the memory channel is re-selected.

✔ For your convenient!
Even no tone type is selected, either tone squelch or DTCS, pushing [MODE•SCAN] while pushing and holding [FUNC] also start tone scan. In this case, the tone scan searching for tone squelch frequency only.
General

Set mode is used for programming infrequently changed values or conditions of functions.

In addition, the IC-R5 has an expanded set mode which is used for programming even more infrequently changed values or conditions of functions. When turning the expanded set mode OFF, only half of the set mode items are displayed for simple operation.

Set mode entering and operation

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select the desired item.
3. While pushing [FUNC], rotate [DIAL] to select the desired value or condition.
4. Push [TS•SET] to exit set mode, or rotate [DIAL] to select another set mode item.

Expanded set mode ON/OFF

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select "EXPAND" item.
3. While pushing [FUNC], rotate [DIAL] to turn the expanded set mode ON and OFF.
4. Rotate [DIAL] to select the desired item.
5. While pushing [FUNC], rotate [DIAL] to select the desired value or condition.
6. Push [TS•SET] to exit set mode, or rotate [DIAL] to select another item.
Set mode items

The following items are available in the set mode and expanded set mode.

General set mode items

- Dial select step (p. 41)
- Priority watch (p. 41)
- Key-touch beep (p. 41)
- Beep output level (p. 41)
- Display backlighting (p. 41)
- Power save (p. 42)
- Antenna selection* (p. 42)
- Expanded set mode (p. 39)

*Appears when accessing set mode from AM broadcast band or FM broadcast band only.

Expanded set mode items

- Key lock effect (p. 43)
- Dial speed acceleration (p. 43)
- Monitor switch action (p. 43)
- Auto power OFF (p. 44)
- Scan pause timer (p. 44)
- Scan resume timer (p. 44)
- Scan stop beep (p. 44)
- Offset frequency (p. 45)
- Duplex direction (p. 45)
- Tone squelch (p. 45)
- Tone frequency (p. 46)
- DTCS code (p. 46)
- DTCS polarity (p. 46)
- LCD contrast (p. 47)
- Weather alert† (p. 47)
- Power save (p. 42)
- Display backlighting (p. 41)
- Antenna selection* (p. 42)
- Expanded set mode (p. 39)
- Key-touch beep (p. 41)
- Beep output level (p. 41)

†Available for the USA version only.
9 SET MODE

◊ Dial select step
Select the tuning step while pushing [FUNC] from 100 kHz, 1 MHz (default) and 10 MHz.

1 MHz step 100 kHz step

◊ Priority watch
Turn the priority watch or priority beep (priority watch with beep emission capability) ON. (default: OFF)
• ON : Start priority watch after exiting set mode.
• BELL : Emits beeps and blinking “(••)” indicator when a signal is received on the priority frequency.

Priority watch ON Priority beep ON

◊ Key-touch beep
The key-touch beep can be turned OFF for silent operation. (default: ON)

Key-touch beep ON Key-touch beep OFF

◊ Beep output level
Adjust the key-touch beep tone level to the desired level within 32 levels or to the related level with volume control.
• VOLUME : The beep tone level is linked with the volume set level. (default)
• _ _ _ _ _ _ – ooo ooo : The beep tone level is fixed in 32 steps.

The key-touch beep (previous item) must be set to ON to have a beep tone.

Related to volume level Fixed output level

◊ Display backlighting
The receiver has display backlighting with a 5 sec. timer for nighttime operation. The backlighting can be turned ON continuously or turned OFF, if desired.
• AUTO : Lights when some operation is performed, goes out after 5 sec. (default)
• ON : Lights continuously during receiver power is ON.
• OFF : Never lights.

Auto setting Continuously ON setting
**Power save**

The power save function reduces the current drain to conserve battery power. This power save function can be turned OFF, if desired.

In the default setting ("ON" selection), the power save function is activated in 1:4 (125 msec.: 500 msec.) ratio when no signal is received for 5 sec. The ratio becomes 1:8 (125 msec.: 1 sec.) when no signal is received for another 60 sec.

![Power save ON](image1) ![Power save OFF](image2)

**Antenna selection**

This item appears only when accessing set mode from AM or FM broadcast band, 0.495–1.620 MHz or 76.000–107.995 MHz (differ according to version), respectively. And the selectable condition is differ according to the selected band.

Select using antenna for the AM or FM broadcast band reception independently.

- **EXT**: Use the antenna connected to the antenna connector. (default)
- **BAR**: Use the internal bar antenna for AM broadcast band reception. (This selection appears only when accessing set mode from AM broadcast band.)
- **EAR**: Use the connected earphone's cable as the antenna for FM broadcast band reception. (This selection appears only when accessing set mode from FM broadcast band.)

![External antenna](image3) ![Internal bar antenna](image4) ![Connected earphone cable](image5)
9 SET MODE

◊ Key lock effect
While the key lock function is ON, [▲][▼] and [SQL] can still be accessed. Accessible switches can be set to one of 4 groups. [PWR] and [FUNC]+[BAND] are also accessible during the lock, however, these switches are not effected by this setting.

• NORMAL: [▲][▼] and [SQL] are accessible. (default)
• NO SQL: [SQL] is accessible.
• NO VOL: [▲][▼] are accessible.
• ALL: No accessible switch is available, except [PWR] and [FUNC]+[BAND].

◊ Dial speed acceleration
The dial speed acceleration automatically speeds up the tuning dial speed when rotating [DIAL] rapidly.

• ON: The dial speed acceleration is tuned ON. (default)
• OFF: The dial speed acceleration is turned OFF.

◊ Monitor switch action
The monitor switch, [SQL], can be set as a ‘sticky’ switch. When set to the sticky condition, each push of [SQL] toggles the monitor function ON and OFF.

• PUSH: Pushing and holding [SQL] to monitor the frequency. (default)
• HOLD: Push [SQL] momentarily to monitor the frequency and push momentarily again to cancel it.
diamond Auto power OFF

The receiver can be set to automatically turn OFF after a specified period with a beep when no key operations are performed.

30 min., 1 hour, 1.5 hours, 2 hours and OFF (default) can be specified. The specified period is retained even when the receiver is turned OFF by the auto power OFF function. To cancel the function, select “OFF” in this set mode.

diamond Scan pause timer

Selects the scan pause time. When receiving signals, the scan pauses according to the scan pause time.

- 2–20 : Scan pauses for 2–20 sec. on a received signal, and selected in 2 sec. steps. (default: 10 sec.)
- HOLD : Scan pauses on a received signal until it disappears. Rotate [DIAL] to resume manually.

diamond Scan resume timer

Selects scan resume time. Scan resumes after the specified period when the received signal disappears.

- 0 : Scan resumes immediately when the received signal disappears.
- 1–5 : Scan pause 1–5 sec. after the received signal disappears. (default: 2 sec.)
- HOLD : Scan pauses on the received signal even if it disappears. Rotate [DIAL] to resume manually.

diamond Scan stop beep

Turns the scan stop beep function ON and OFF. When the function is activated (“ON” is selected), a long beep will sound each time when signal is received during scan.

- OFF : No beep is sound when receiving a signal
- ON : A long beep is sound when receiving a signal
9 SET MODE

◊ Offset frequency
Sets the duplex offset frequency for each frequency band independently within 0 to 159.995 MHz range. During duplex operation (–DUP or +DUP), the monitoring frequency (while [SQL] is pushed) shifts the set frequency.

The default value may differ according to the selected frequency band (before accessing set mode) and receiver version.

The selected tuning step in VFO mode is used for the offset frequency setting.

◊ Duplex direction
Sets the duplex direction. The displaying frequency shifts the programmed frequency in offset frequency above when monitor function is in use (while pushing [SQL]).

• OFF : Simplex operation. (default)
• –DUP : The displaying frequency shifts down during monitor.
• +DUP : The displaying frequency shifts up during monitor.

◊ Tone squelch
Sets tone or DTCS squelch operation and pocket beep capability when waiting for the desired signal.

• OFF : Regular noise squelch operation. (default)
• TSQL : Using tone squelch. The squelch opens only when a signal with matched subaudible tone is received.
• P BEEP : In addition to the “TSQL” setting, alert beeps will sound when a signal with matched tone is received.
• DTCS : Using DTCS squelch. The squelch opens only when a signal with matched DTCS code is received.
• P DTCS : In addition to the “DTCS” setting, alert beeps will sound when a signal with matched DTCS code is received.

The subaudible tone frequency and DTCS code is programmed in the tone frequency and DTCS code item, respectively.
**SET MODE**

**Tone frequency**
Sets subaudible tone frequency for tone squelch operation. Total of 50 tone frequencies (67.0–254.1 Hz) are available. (default: 88.5 Hz)

- **Available subaudible tone frequencies**
  - 67.0, 79.7, 94.8, 110.9, 121.8, 156.7, 171.3, 186.2, 203.5, 229.1
  - 69.3, 82.5, 97.4, 114.8, 136.5, 159.8, 173.8, 189.9, 206.5, 233.6
  - 71.9, 85.4, 100.0, 118.8, 141.3, 162.2, 177.3, 192.8, 210.7, 241.8
  - 74.4, 88.5, 103.5, 123.0, 146.2, 165.5, 179.9, 196.6, 218.1, 250.3
  - 77.0, 91.5, 107.2, 127.3, 151.4, 167.9, 183.5, 199.5, 225.7, 254.1

- **88.5 Hz setting**
- **254.1 Hz setting**

**DTCS code**
Sets DTCS code for DTCS squelch operation. Total of 104 codes (023–754) are available. (default: 023)

- **Available DTCS code**
  - 023, 054, 125, 165, 245, 274, 356, 445, 506, 627, 722
  - 025, 065, 131, 172, 246, 306, 364, 446, 516, 631, 734
  - 026, 071, 132, 174, 251, 311, 365, 452, 523, 632, 743
  - 031, 072, 134, 205, 252, 315, 371, 454, 526, 654, 754
  - 032, 073, 143, 212, 255, 325, 411, 455, 532, 662, 762
  - 036, 074, 145, 223, 261, 331, 412, 462, 546, 664
  - 043, 114, 152, 225, 263, 332, 413, 464, 565, 703
  - 047, 115, 155, 226, 265, 343, 423, 465, 606, 712
  - 051, 116, 156, 243, 266, 346, 431, 466, 612, 723
  - 053, 122, 162, 244, 271, 351, 432, 503, 624, 731

- **Code 023 setting**
- **Code 754 setting**

**DTCS polarity**
Sets DTCS polarity from normal and reverse. (default: NORMAL)

- **Normal setting**
- **Reverse setting**
9 SET MODE

◊ **LCD contrast**
Sets the LCD contrast within 1 (light) to 4 (dark) levels as desired. (default: 3)

Contraset 3 setting

Contraset 4 setting

◊ **Weather alert function**
_U.S.A. version only_
Turns weather alert function ON and OFF.

Weather alert OFF

Weather alert ON
OTHER FUNCTIONS

Antenna selection

The IC-R5 has an internal bar antenna for receiving AM broadcast band (0.495–1.620 MHz) signals. In addition, the connected earphone's cable can be used as an antenna for receiving FM broadcast band (76.000–107.995 MHz; differs according to version) signals.

1. Select VFO mode with [V/M•S.MW•<DP>].
2. Push [BAND•<LOCK>] several times, or while pushing [BAND•<LOCK>] rotate [DIAL] to select the AM or FM broadcast band.
3. Push [TS•SET] for 1 sec. to enter set mode.
4. Rotate [DIAL] to select “ANT” item.
   • “ANT” disappears after 1 sec. and “EXT” (default) and “An” appear.
5. While pushing [FUNC], rotate [DIAL] to select “BAR” when set mode has accessed from the AM broadcast band; select “EAR” when set mode has accessed from the FM broadcast band.

NOTE:
- Some noise or spurious may be received when the internal bar or earphone cable is used for antenna.
- The supplied or third party’s antenna MUST BE connected to the antenna connector to receive signals other than AM or FM broadcast bands.
- When receiving an AM broadcast signal with internal bar antenna, aim the receiver to better audio direction.
- When the internal bar or earphone cable is used for antenna, the attenuator function cannot be used.
10 OTHER FUNCTIONS

- **[DIAL] function assignment**

  The [DIAL] control can be used as an audio volume control instead of [▲]/[▼] keys to suit your preference. However, while [DIAL] is functions as an audio volume, [▲]/[▼] keys function as tuning control.

  ➤ While pushing [FUNC], push [TS•SET] to toggle the [DIAL] function from tuning dial and audio volume.
  - “VOL” appears when [DIAL] functions as an audio volume.

- **Weather channel operation**

  - **Weather channel selection**

  1. Select VFO mode with [V/M•S.MW•～].
  2. Push [BAND•LOCK] several times, or while pushing [BAND•LOCK] rotate [DIAL] to select the weather channel group.
  3. Rotate [DIAL] to select the desired weather channel.

  - **Weather channel indication**

  4. Push [BAND•LOCK] to change frequency band, or push [V/M•S.MW•～] to select memory mode.

- **[DIAL] and [▲]/[▼] functions**

<table>

Weather alert function

NOAA broadcast stations transmit weather alert tones before important weather announcements. When the weather alert function is turned ON, the selected weather channel is monitored each 5 sec. for the announcement. When the alert signal is detected, the “AL.T” and the WX channel are displayed alternately and sounds a beep tone until the receiver is operated. The previously selected (used) weather channel is checked periodically during standby or while scanning.

1. Select the desired weather channel.
2. Turn the weather alert function ON in set mode.
   ▶ Push [TS•SET] to enter set mode.
   ▶ Rotate [DIAL] to select the weather alert item, then rotate [DIAL] while pushing and holding [FUNC] to set ON.
   ▶ Push [TS•SET] to exit set mode.
3. Set the desired stand-by condition.
   • Select VFO or memory channel.
   • Scan or priority watch operation can also be selected.
4. When the alert is detected, a beep sounds and the following indication will be displayed.

```
WX - 01
AL.T
```

Show above indications alternately.

5. Turn the weather alert function OFF in set mode.

NOTE: While receiving a signal (on a frequency other than the weather alert ON frequency), the receiving signal or audio will be interrupted momentarily every 5 sec. (approx.) in case the alert function is turned ON. This symptom is caused by the WX alert function. To cancel these symptoms, set the weather alert item OFF in set mode.
10 OTHER FUNCTIONS

Data cloning
AT POWER ON

Cloning allows you to quickly and easily transfer the programmed contents from one receiver to another; or data from a personal computer to a receiver using the optional CS-R5 CLONING SOFTWARE.

Cloning between receivers
① Connect the OPC-474 cloning cable to the [SP] jack of the master and sub-receivers.
  • The master receiver is used to send data to the sub-receiver.

Master receiver
• While pushing [V/M•S.MW• ~], turn power ON to enter cloning mode (master receiver only—power ON only for sub-receiver).

Sub-receiver
Push [SQL] on the master receiver.
  • The receiver show following indications.

During cloning

After cloning

② When cloning is finished, turn power OFF, then ON to exit cloning mode.
Cloning using a personal computer
Data can be cloned to and from a personal computer (Microsoft® Windows® 98/Me/2000/XP/Windows Vista™) using the optional CS-R5 CLONING SOFTWARE and the optional OPC-478U CLONING CABLE. Consult the CS-R5 CLONING SOFTWARE HELP file for details.

Cloning error
NOTE: DO NOT push any key on the sub-receiver during cloning. This will cause a cloning error.

When the display appears as below, a cloning error has occurred.

In such a case, both receivers automatically return to the clone standby condition and cloning must be repeated.

Auto power-off function
The IC-R5 can be set to automatically turn OFF after a specified period in which no operation is performed.

120 min., 90 min., 60 min., 30 min. and OFF can be specified. The specified period is retained even when the receiver is turned OFF by the auto power-off function. To cancel the function, select “OFF” in step ③ below.

1. Push [TS•SET] for 1 sec. to enter set mode.
2. Rotate [DIAL] to select “AP OFF” item.
   • Turn the expanded set mode ON for selection. (p. 39)
3. While pushing [FUNC], rotate [DIAL] to select the desired time or to turn the function OFF.

Microsoft, Windows and Windows Vista are either registered trademarks and/or trademarks of Microsoft Corporation in the U.S.A. and other countries.
10 OTHER FUNCTIONS

■ Partial reset

If you want to initialize the operating conditions (VFO frequency, VFO settings, set mode contents) without clearing the memory contents, a partial resetting function is available for the receiver.

⇒ While pushing [FUNC] and [TS•SET], turn the power ON to partially reset the receiver.

■ All reset

The function display may occasionally display erroneous information (e.g. when first applying power). This may be caused externally by static electricity or by other factors.

If this problem occurs, turn power OFF. After waiting a few seconds, turn power ON again. If the problem persists, perform the following procedure.

* Partial resetting is also available. See left for details.

IMPORTANT!:
Resetting the receiver CLEARS all memory information and initializes all values in the receiver, including TV channel skip setting.

⇒ While pushing [FUNC] and [V/M•S.MW•MXP], turn the power ON to reset the CPU.

*The appearing frequency is differ according to receiver version.
### TV channels

The following tables show the channels versus video and audio frequencies depending on each version.

</tr>
<tr>
<td>Frequency cannot be set.</td>
<td>• The lock function is activated.</td>
<td>• While pushing [FUNC], push [BAND+OLED] for 1 sec. to turn the function OFF.</td>
<td>p. 10</td>
</tr>
<tr>
<td>No beep sound.</td>
<td>• Beep tones are turned OFF or the beep tone level is too low.</td>
<td>• Turn beep tone ON or set the beep tone level to appropriate level in set mode.</td>
<td>p. 41</td>
</tr>
<tr>
<td>Receive audio is distorted.</td>
<td>• The operating mode is not selected correctly.</td>
<td>• Push [MODE-SCAN] several times to select a suitable operating mode.</td>
<td>p. 12</td>
</tr>
<tr>
<td>Desired set mode item cannot be selected.</td>
<td>• “EXPAND” item is set to OFF.</td>
<td>• Turn “EXPAND” item ON.</td>
<td>p. 39</td>
</tr>
<tr>
<td></td>
<td>• Some set mode items can be selected in the AM or FM broadcast band only.</td>
<td>• Choose the AM or FM broadcast band.</td>
<td>p. 7</td>
</tr>
<tr>
<td>Programmed scan does not start.</td>
<td>• Program scan edges are not programmed.</td>
<td>• Program a pair of scan edge channels.</td>
<td>p. 27</td>
</tr>
<tr>
<td>Memory or bank scan does not start.</td>
<td>• No or only one memory or bank channel is programmed.</td>
<td>• Program at least 2 memory or bank channels</td>
<td>pgs. 16, 17</td>
</tr>
<tr>
<td>Installed batteries cannot be charged.</td>
<td>• The batteries over discharged.</td>
<td>• Re-install the batteries (wait at least for 1 sec.), then plug the AC adapter while pushing [FUNC].</td>
<td>p. 6</td>
</tr>
</tbody>
</table>
12 MAINTENANCE

■ CP-18A/E fuse replacement

If the fuse blows or the receiver stops functioning while operating with the optional CP-18A/E, find the source of the problem if possible, and replace the damaged fuse with a new, rated one (FGB 5 A) as shown below.
### GENERAL

- **Frequency coverage:**
  - USA: 0.150–821.995, 851.000–866.995, 896.000–1309.995 MHz
  - France: 0.150–29.995, 50.200–51.200, 87.500–108.000, 144.000–146.000, 430.000–440.000, 1240.000–1300.000 MHz
  - Other than above: 0.150–1309.995 MHz

- **Number of memory channels:** 1250 (incl. 50 scan edges and 200 auto write channels)

- **Frequency resolution:** 5, 6.25, 8.33, *9*, 10, 12.5, 15, 20, 25, 30, 50, 100 kHz
  - *selectable depending on the operating frequency band.

- **Operating temperature range:** –10°C to +60°C; +14˚F to +140˚F

- **Reference frequency stability:** ±6 ppm (–10°C to +60°C)

- **Power supply requirement:**
  - 2 AA (R6) alkaline calls
  - 2 AA (R6) Ni-Cd or Ni-MH cells
  - 6.0 V DC ±5% (with AC adapter or CP-18A/E)

- **Current drain (at 3.0 V DC):**
  - standby (power saved) 41 mA typical
  - max. audio 170 mA typical
  - charging (at 6.0 V DC) 120 mA typical

- **Antenna connector:** SMA (50 Ω)

- **Dimensions (proj. not included):** 58(W) × 86(H) × 27(D) mm
  - 2½²(W)x3½(H)x1⅛(D) in

- **Weight (approx.):** 185 g; 6.5 oz

### RECEIVER

- **Receive system:** Triple-conversion superheterodyne

- **Intermediate frequencies:**
  - 1st: 266.7 MHz
  - 2nd: 19.65 MHz
  - 3rd: 450 kHz

- **Sensitivity and squelch sensitivity (except spurious points):**

  **FM (1 kHz/3.5 kHz Dev.; 12 dB SINAD):**
  - 0.32 µV typ.
  - 0.2 µV typ.
  - 0.18 µV typ.
  - 0.2 µV typ.
  - 0.18 µV typ.
  - 0.28 µV typ.
  - *0.71 µV typ. for 851.000–866.995 MHz range of USA version.

  **WFM (1 kHz/52.5 kHz Dev.; 12 dB SINAD):**
  - 0.89 µV typ.
  - 0.71 µV typ.
  - 1.0 µV typ.

  **AM (1 kHz/30% MOD.; 10 dB S/N):**
  - 1.3 µV typ.
  - 0.71 µV typ.
  - 0.56 µV typ.
  - 0.56 µV typ.
  - 0.71 µV typ.

- **Selectivity:**
  - AM/FM: More than 15 kHz/–9 dB
  - WFM: Less than 30 kHz/–60 dB
  - WFM: More than 150 kHz/–6 dB

- **AF output power (at 3.0 V DC):** 100 mW typical at 10% distortion with an 8 Ω load

- **Ext. speaker connector:** 3-conductor 3.5 (d) mm (¼")/8 Ω

---

All stated specifications are subject to change without notice or obligation.
14 OPTIONS

Options

**BC-149 A/D AC ADAPTER**
Regularly charges the installed batteries. 6 V DC/1 A output.

**CP-18A/E CIGARETTE LIGHTER CABLE WITH DC-DC CONVERTER**
Allows you to operate the receiver through a 12 V cigarette lighter socket, and also charges the installed rechargeable batteries regularly. A DC-DC converter is built-in.

**AD-92SMA ANTENNA CONNECTOR ADAPTER**
Allows you to connect an external antenna with a BNC connector.

**SP-13 EARPHONE**
Provides clear receive audio in noisy environments.

**LC-146A CARRYING CASE**
Helps protect the receiver from scratches, etc.

**OPC-474 CLONING CABLE**
For connection between receivers for data cloning.

**CS-R5 CLONING SOFTWARE**
+ **OPC-478U CLONING CABLE** (USB type)
Allows you to transfer data, such as memories, and quickly and easily edit and store data via a PC (for Microsoft® Windows® 98/Me/2000/XP/Windows Vista™). Current RS-232C (DB 9-pin) type cloning cable, OPC-478, is also available.
Important operating instructions are summed up in this and the following page for your simple reference. By cutting along the line and folding on the dotted line, it will become a card sized operating guide which can easily be carried in a card case or wallet, etc.
Memory channel programming

Set the desired frequency and other functions in VFO mode.
Press [V/M • S.MW • ~] for 1 sec. to enter select memory write condition.
1 short and 1 long beeps sound.
Rotate [DIAL] to select the desired memory channel number.
Press [V/M • S.MW • ~] for 1 sec. again to program the contents into the selected channel.
3 beeps sound.

Scan skip setting
Press [V/M • S.MW • ~] to select memory mode.
Rotate [DIAL] to select the desired memory channel.
While pushing [FUNC], push [V/M • S.MW • ~] to set the skip setting (skip channel or skip frequency) ON and OFF.
3 beeps sound.

VFO scans
Press [V/M • S.MW • ~] to select VFO mode.
Press [MODE • SCAN] for 1 sec. • One of scan type "ALL," "BAND," or "PROG xx" (xx= 0 – 24) appear.
Rotate [DIAL] to select the desired scan type, in this case.
Push [MODE • SCAN] momentarily to start scan.
• Rotate [DIAL] to change the scanning direction.
• During scan, push [V/M • S.MW • ~] to start auto memory write scan.
Push [MODE • SCAN] momentarily again to stop scan.

Memory scans
Press [V/M • S.MW • ~] to select memory mode.
• Push [BAND •] to select a bank, if desired.
Push [MODE • SCAN] for 1 sec. • One of scan type "ALL," or "BANK" appear, for bank scan. Rotate [DIAL] to select the desired scan type, in this case.
• When memory mode is selected at this step, memory scan starts.
Push [MODE • SCAN] momentarily to start bank scan.
• Rotate [DIAL] to change the scanning direction.
Push [MODE • SCAN] momentarily again to stop scan.
