D-STAR System Introduction
The biggest appeal of D-STAR is long distance communication over the Internet gateway through repeaters. Even with a handheld radio, you can communicate with a friend in another city or country with clear audio. You can access to your local repeater and route to a different repeater, even from the opposite side of the earth.

The term D-STAR is Digital Smart Technology for Amateur Radio. It is an open protocol for digital communications established by JARL (Japan Amateur Radio League).

The Terminal mode and Access point mode enable you to make D-STAR calls through the Internet, even from areas where no D-STAR repeater is accessible by RF signal.

**What is D-STAR?**

The term D-STAR is Digital Smart Technology for Amateur Radio. It is an open protocol for digital communications established by JARL (Japan Amateur Radio League).

**Digital Modulation For Clear Audio**

As the digital voice incorporates GMSK modulation with AMBE™’s Forward Error Correction, the result is clear intelligible audio with digital clarity using only 6 kHz occupied bandwidth*. It provides clearer audio than analog FM mode without typically increasing white noise level at the fringes of the communication range.

* Emission designator: 6K00F7W.

**Routing and Linking**

One of the great features of D-STAR is the user’s ability to talk anywhere they want via call sign commands. With the basic call sign routing, you can route your communications to a specific user or repeater. You are not required to know where repeater the person you want to communicate with is located.

For those repeaters running dplus software, you have the capability of linking to another repeater or a group of repeaters through a reflector. Reflectors are a great way to meet new people and have communications with a group of users from all over the world at the same time.

**Terminal Mode and Access Point Mode**

The Terminal mode and Access point mode enable you to make D-STAR calls through the Internet, even from areas where no D-STAR repeater is accessible by RF signal.

**Terminal Mode**

Connect a D-STAR radio (either ID-31A PLUS, ID-51A PLUS2 or ID-4100A) to the Internet through a PC or Android™ device, and send your voice and/or data through the Internet gateway to a destination repeater.

**Access Point Mode**

Use an ID-31A PLUS, ID-51A PLUS2 or ID-4100A radios connected to the Internet through a PC or Android™ device, as an Access point. You can use another D-STAR radio to send your voice and/or data through the Access point radio, and communicate with D-STAR stations all over the world.

**DD Mode Operation**

DD mode is a 128 kbps data mode in a 10 W mobile package on the 23 cm band.* It is possible to connect to the Internet via gateway. You can browse the homepage by connecting a personal computer.

* A new DD mode compatible model will be available in the near future.

**Note for the Terminal mode and Access Point mode:**

- You need an Internet connection with an IPv4 Global IP address. If you use a cellular system, you need an IPv4 Global IP address assigned to your Windows® or Android™ device.
- Before operating in the Terminal mode or Access Point mode, BE SURE to check your local regulation or laws.
- When operating in the Access Point mode, you need two call signs. One for the Access Point transceiver and one for the Remote D-STAR transceiver.
- For Access point or Terminal mode operation, you must register your MY and Access point call signs with a Gateway repeater/server that has the RS-RP3C installed.
- When using the terminal mode or access point mode through a PC, an optional free download software, RS-M38W, is required to be installed in the PC.
- When using the terminal mode or access point mode through an Android™ device, an optional free download application, RS-M31A, is required to be installed in the Android™ device.

PC OS: Windows® 10, Windows® 8.1, Windows® 7  
Android™ OS: Android™ 4.0/4.1.4/2.3/4.4/5.0/6.0/7.0
Share Pictures
Pictures on your iOS™ or Android™ device can be shared over D-STAR network. Pictures of your shack, operating place in the field, rigs, or friends can be sent to other D-STAR radio that are also using the application. Add images and make QSOs even more enjoyable. Pictures can be sent in the DV Fast Data mode or conventional DV mode (with voice).

DR Functions and Remote Settings
You can set the radio’s “FROM” and “TO” fields and change some of the radio’s function settings from your iOS™/Android™ device. When using with the optional VS-3 Bluetooth® headset, you can wirelessly talk through the ID-4100A or ID-5100A from a short distance* away from your rig.

* Communication range of Bluetooth® is approximately 10 meters (33 feet).

Repeater List Viewer
The repeater list viewer shows repeater information including frequencies, call signs and frequency offsets in the repeater list. You can use it to manually set your radio when you are in a different area from your usual operating environment.

Receive History
The receiver history enables to read and edit the receiver station’s information. Additional information from an Internet database, such as QRZ.com or APRS.fi, can be downloaded.

Text Messaging
Text messaging enables you to chat with other D-STAR users that are using the application. Use the function when texting is better than exchanging information over voice. By using iOS™/Android™ devices, you can exchange messages in your preferred language.

D-STAR Stations and Repeater Sites Mapping
See the location of other stations or repeater sites on a map using received position data. The radio’s “FROM” and “TO” can be automatically set by tapping a repeater site or a D-PRS station on the map. When used with a locally cached map, your own and other station’s locations can be shown without needing an Internet connection (Offline map function*). * For only the RS-MS1A.

Call Sign List
The application enables you to add and edit destination call signs and names used in the DR function.

Import and Export*
A user-programmable repeater list or a repeater list on the Internet can be imported from a PC to the application. In addition, receive history can be exported from the application to a PC.

* iTunes is required for the RS-MS1I.

Other Functions
- **Transceiver Setting** Sets certain transceiver’s settings.
- **Application Setting** Sets the RS-MS1A/I settings.

*1 Download free from Google Play™. (OS: Android™ 4.0 or later)
*2 Download free from App Store. (OS: iOS™ 8.0.1 or later) *3 You can not change transceiver setting.

The RS-MS1/RS-MS1A may not work, depending on the OS version, installed applications, and so on.
GPS Location Reporting Functions

Displays Your Own and Received Location Data
The ID-51A PLUS2, ID-31A PLUS, ID-5100A or ID-4100A have an integrated GPS receiver and show your own location, course, speed and altitude on the display. The GPS location data can be transmitted with voice. Received location information is also shown with distance and direction from your location.

The IC-7100 and IC-9100 enable you to manually input the current position or connect an external GPS receiver.

Export to the Android™ or iOS™ Application
When connected with an Android™ or iOS™ device*, received location data can be plotted on a Map Application.
* ID-51A PLUS2, ID-31A PLUS, ID-5100A and ID-4100A with RS-MS1A for Android™ device.
* ID-4100A with RS-MS1I for iOS™ device.

Repeater Search Function
The repeater search function* assists you in accessing nearby repeaters, even in areas you are visiting for the first time. The function searches for a nearby repeater using the repeater memories with the GPS location data.
* ID-51A PLUS2, ID-31A PLUS, ID-5100A, ID-4100A and IC-7100 functions.

To use the near repeater search function, the position data of the repeater is required. The radios will be shipped with the D-STAR repeater memories preprogrammed, but the position data of some D-STAR repeaters may not be entered or exact.

Automatic Location Reply Function*
When receiving a call addressed to your call sign, this function automatically replies your current location data. Replied location data will pop up on the caller’s display.
* ID-31A PLUS, ID-51A PLUS2, ID-4100A and ID-5100A

GPS Log Function*
The GPS log function logs your location data at regular intervals (1 second–60 seconds, depending on setting) and memorizes this in the SD card or microSD card to export to your PC. You can import the data into Google Earth or other map applications.
*SD card microSD card required.
*ID-31A PLUS, ID-51A PLUS2, ID-4100A and ID-5100A

D-PRS (Digital Packet Reporting System)
D-PRS converts the D-STAR GPS information to APRS™ compatible strings and presents it to the APRS-IS (APRS Internet Server) and other APRS™ clients. The APRS™ maps show real-time APRS™ information and tracks D-STAR stations on the Internet.
**Upgraded Entry Model with New Functions**

- 430 (440) MHz single band
- 3 color variations (Silver/Red/Gold)
- DV enhanced functions with an Android™ device*1

UHF DIGITAL TRANSCEIVER (GPS Integrated)

**ID-31A PLUS**

**Enhanced Functions and Great Digital Features**

- 144/430 (440) MHz, dualwatch (VHF/VHF, UHF/UHF, VHF/UHF)
- Independent AM/FM receiver
- DV enhanced functions with an Android™ device*1

VHF/UHF DIGITAL TRANSCEIVER (GPS Integrated)

**ID-51A PLUS2**

**Enjoy D-STAR More Actively and Comfortably**

- 144/430 (440) MHz dual band
- Compact, detachable controller for flexible installation
- DV enhanced functions with iOS™ and Android™ devices*2

VHF/UHF DIGITAL TRANSCEIVER (GPS Integrated)

**ID-4100A**

**Innovation and Mobility Taken to the Next Level**

- 144/430 (440) MHz, dualwatch (VHF/VHF, UHF/UHF, VHF/UHF)
- Intuitive touch screen operation
- DV enhanced functions with an Android™ device*3

VHF/UHF DIGITAL TRANSCEIVER (GPS Integrated)

**ID-5100A**

**Intuitive Touch Screen, Quick Response, Multi-band Radio**

- HF/50/144/430 (440) MHz multi-band
- Compact with separated front panel
- Controls at your fingertips with an angled display

HF/VHF/UHF TRANSCEIVER

**IC-7100**

**The All-Round Transceiver, IC-9100**

- HF/50/144/430 (440) MHz band DV mode (UT-121 required)
- 1200 MHz band DV mode (UT-121 and UX-9100 required)
- Independent dual mode, one each for HF/50 MHz, 144 MHz and 430 (440) MHz Bands.

HF/VHF/UHF TRANSCEIVER

**IC-9100**

---

*1 Optional data communication cable OPC-2350LU and RS-MS1A (for Android™) are required.
*2 Optional Bluetooth® unit UT-137 and RS-MS1A (for Android™) or RS-MS1I (for iOS™) are required.
*3 Optional Bluetooth® unit UT-133A and RS-MS1A (for Android™) are required.
## D-STAR Worldwide Repeater Network

![D-STAR Map]

**North America**
- More than 770 Sites

**Central and South America**
- More than 47 Sites

**Europe**
- More than 560 Sites

**Asia**
- More than 12 Sites

**Japan**
- More than 25 Sites

**Oceania**
- More than 38 Sites

*Some repeaters may not be connected to an IP network.

## D-STAR Repeater

### ID-RP2C
- Repeater controller
- One unit is required for each repeater site and connects up to four RF modules. Transfers the received signal to the specified RF module, or to the Internet gateway server.

### ID-RP2V
- 1200 MHz DV mode RF module
- These are DV mode RF modules for the respective bands.

### ID-RP2000V
- 144 MHz DV mode RF module
- With a combination of these RF modules, cross band operation between the 144, 430(440) and 1200 (you can go between all various bands) MHz bands is possible.

### ID-RP4000V
- 430(440) MHz DV mode RF module

### ID-RP2D
- 1200 MHz DD mode RF module
- The ID-RP2D is the DD mode RF module for 1200 MHz. It provides 128 kbps data speed communication.

### RS-RP3C
- Internet gateway software
- The Internet gateway connects the D-STAR repeater site to the Internet, and links multiple D-STAR repeaters through the Internet.
